BESS battery storage facility

The BESS battery storage facility in San Juan Capistrano is a very dangerous site for the potential for fires and hazardous materials and chemicals such as chromium and lithium if the facility catches fire the homes within 1500 feet at the top of the hill where thousands of homes and convalescent facilities are located would be endangered before the fire department can even get there. The battery storage facility if it overheats would potentially send hazardous chemicals and substances down the Oso Creek watershed and then into the San Juan Creek and into the Pacific Ocean at Doheny Beach. The pollution of the ocean and the surrounding environmental areas which are sensitive will be totally affected by these toxic chemicals and will be a major huge environmental hazard for South Orange County and affect three cities and hundreds of thousands of people.
