

<b>DOCKETED</b>	
<b>Docket Number:</b>	24-IEPR-04
<b>Project Title:</b>	Wave and Tidal Energy
<b>TN #:</b>	258327
<b>Document Title:</b>	Presentation - Permitting Considerations for Wave and Tidal Energy
<b>Description:</b>	3A. Eli Harland, CEC
<b>Filer:</b>	Raquel Kravitz
<b>Organization:</b>	California Energy Commission
<b>Submitter Role:</b>	Commission Staff
<b>Submission Date:</b>	8/6/2024 1:42:36 PM
<b>Docketed Date:</b>	8/6/2024

# Integrated Energy Policy Report Workshop: Permitting Considerations for Wave and Tidal Energy

August 8, 2024

Eli Harland, Supervisor, Offshore Renewable Energy Planning Unit  
Siting, Transmission, and Environmental Protection Division

# Assessing Permitting Requirements for Wave and Tidal Energy

Underlying Assumptions used to evaluate permitting requirements:

- Technology specific parameters
- Location, power output, and grid connectivity
- Regulatory processes and standards

Two useful resources:

- [Memorandum of Understanding between California and the Federal Energy Regulatory Commission](#)
- Unites States Department of Energy: [Handbook of Marine Hydrokinetic Regulatory Processes](#)

*Public Resources Code 25996 (b) (3) Evaluate wave energy and tidal energy project potential transmission needs and **permitting requirements**.*

# State Agency Roles and Requirements

California state agencies with likely jurisdiction:

- State Lands Commission
- State or Regional Water Resources Control Board
- Department of Fish and Wildlife
- California Coastal Commission
  - Coastal Zone Management Act (CZMA)
  - Coastal Development Permit (CDP)
  - San Francisco Bay Conservation and Development Commission

California project review would most likely include:

- CEQA compliance and Certification
- Section 401 Water Quality Certification
- CZMA
- CDP
- State Tidelands Lease
- California Endangered Species Consultation
- Land and Streambed Alteration Agreement
- Scientific Collecting Permit

Note: other federal and local agencies will have permitting considerations for wave and tidal energy development

# Collaborative Project Review

Project review considerations:

- Effective and efficient review involves all parties early and often
  - Project objectives
  - Agency points of view
  - Issues identification
  - Regulatory environment and processes
- Information sharing and reducing duplication
- Maintaining a project review schedule
- Monitoring strategy to inform adaptive management

---

# Thank You
