Oppose this project

I oppose there being a lithium battery storage site in this location. This area is surrounded by wildfire fuel and homes and in my city alone we have had multiple homes burn down due to malfunction of their electric cars. This technology is still all too new and it poses serious danger if there was a problem. A different location, not in an area surrounded by wildfires and so close to homes would be better for storage of these dangerous batteries. Our home owners insurance rates continue to skyrocket and we do not need another reason for those rates to go up with a preventable potential danger.
