Energy Storage Project

As a close by neighbor of the Energy Storage Project (ESP), I oppose the construction of this new ESP located so close to residential areas, which could impact my life, health, and future. I chose San Juan Capistrano as the location for my forever home, because it was so beautiful, community oriented, and safe. If had had wanted to purchase a home close to an industrial site I would have bought property elsewhere. The construction of energy storage near residential areas is very dangerous and could bring many long term issues for the residents. I believe that the City of San Juan Capistrano has the responsibility to take care of its residents' health and wellbeing.
