## **Opposition**

I am opposed to this project due to extreme safety concerns. This project is going in a highly populated area and within 1 mile of a high school that has 2000 students on campus daily. Additionally, it is within just over a mile of a community college that has thousands of students on campus daily. Additionally, as a 52 year resident of this area, I have personally seen several wildfires on the exact hillside where this battery storage is being built. There have been accidents with battery storage systems in other areas of the state resulting in evacuations for health reasons due to air quality. Why would this go in an area so close to population, children, and schools? Another area needs to be found further away from the population. Move this into the local national Forest. I would still have concerns for wildfire, but at least it's away from people.
