Wind Alternative

Hello I have been doing research on when alternatives. I have found one in Oregon that is micro microhydrosystems within the city water pipe system. I believe this is the best alternative, because the infrastructure is already present, most water pipes systems need to be updated, i'm sure the hydruels can be made out of recycled materials, it will definitely be much cheaper than building and drilling windmills, if one turbine fails, it will not affect the whole city or town because they are interdependent, they will not be an eyesore, and they are safer for the environment and human beings. Please consider this option, do the research, and maybe even create your own system that can be used around the world. Thank you so much for your time and the work you are doing
