## **BESS project**

Our state desperately needs battery storage for the clean energy we generate during the day. Paying other states to take our excess power off our grid is ridiculous. No one wants a storage location within sight of their homes, but given how built up our area is this location is pretty good. It seems to be about 1500 feet away from the nearest house horizontally and quite some distance below it vertically, and connecting to the electrical grid from there is simplified by the existing wires nearby. The project plan includes landscaping and multiple levels of fire protection, and if these items are implemented properly then I do not object to this project.
