## **Please help us utilize safer energy storage technologies than BESS**

I am in disbelief that a Lithium-ion battery facility is under any consideration for residential Vacaville area. It doesn't seem logically smart considering the risks. You generally know the lists of risks. Additionally, homes are close, a hospital and community are near.

It leads me to question if this is only looked at because of it being a (temporary?) financial source.

We heard that new technologies are being developed and they seem a far safer alternative without Vacaville or the state being left with the burden of environmental cleanup when BESS has run out of usefulness.

With genuine concern and sincerity,

Connie Erickson
