## **Act Now B4 Too Late**

Please make the Phase II funding available before the end of the year. Many households have put off these needed improvements for years waiting for the rebates to roll out. Many households are now also put in a position where they cannot take advantage of the mini split rebates even if they qualify without giving up the possibility of also using the electrical panel and wiring upgrades since no-one knows if and when they will be approved.

Strongly suggest that the additional rebates are made active immediately and unchanged from the Federal guidelines - i.e, same dollar amounts and same services covered. This is the only fair solution since these are the expectations that have been in place now for two years. Why fix a plan that is not broken?

Other:

- DIY should be allowed when safety is not a concern.
- At the meeting on 12/18/24, please clarify whether or not the electrical panel and wiring services will be included in Phase II and what month they will become active.
