Absolutely NO to BESS - This would be right by my house!

To Whom It May Concern,

It has been brought to our attention, not by the developer, I might add, but by my concerned neighbors that there is a plan to build a battery/energy storage facility across the street from our home. Our home was built in 1911 and was part of the Kilkenny mansion property, an historic home. My wife was raised in this home and our children are being raised in this home and our future generations will be raised in this home. For years we have had agricultural activity on the proposed site across the street from our home, whether it be a beautiful orchard that we enjoyed the sight of for years, or in most recent years a hay field that was planted seasonally and harvested. Neither of which has caused us concern. But to hear that we are now faced with the potential hazards and eye sore of an energy storage facility, we are ENRAGED and want to stop this process for now and in the future. I am not only concerned about what this will look like visually for us and for our neighbors, but in addition, the effects it will have on the property value of our home. If we wanted to sell our property at any point in the future, which I am not suggesting we would, but if we did, what does that look like for our property value. Who would want to purchase a home with that across the street. And lastly and most importantly, we are parents raising our children here. What about safety for us and our family? With the potential of fire, pollution and who knows what the long-term effects would be with this proposed facility such a short distance from our home??? What about these batteries catching on fire? What about potential leaching of chemicals into the ground and into our wells? If these batteries were to catch on fire the fumes will kill us and destroy the land. All of Vacaville will be affected. No one wants to live around this technology. It is bad for the environment and the health of the people. This is playing with peoples lives and it is unacceptable. These should not be built anywhere. There are many potential hazards and health risks this will cause me and my family members, current and future. We just say NO! We need to stop this and say NO to this. I am asking you to hear my plea and stop this proposed building. Keep this out of my front yard and out of our City. We do not want to look

at this eye sore and we donâ€™t want to be a victim(s) to the potential hazards this could cause. We say NO!!!
