Battery Storage Facility in SHC

There is a proposed lithium battery storage facility to be built on the five in San Juan Capistrano. This is far too close to our homes for safety reasons. There have been enough reports of fires at these type of facilities and with the proximity of our homes we are opposed to the land use. The surrounding cities do not want this nor do the residence of the city, and yet the state law that allows the state to override our desire in our community is not right. There are many other places in the state of California where this can be done that are far from where people live.
