PLEASE DO NOT ALLOW THE BESS SITE TO BE BUILT IN SAN JUAN CAPISTRANO

After the Miss Landing fire that is still burning, it has become quite apparent that the reassurances of these lithium battery storage facilities as being "safe" and just "good clean energy" by the representatives of these companies is A BIG FAT LIE. now the company reps are saying they care about the residents and want them to be safe. This facility CANNOT be built in an area with such high density and near so many homes and an insufficient escape route if something were to happen. These lithium batteries need a lot more developing and need to be SAFE AND NOT SO VOLATILE before we can allow them to be built near water sources that go into the ocean, dry hillsides, a train track, the 5 freeway, thousands of homes, schools and senior housing and facilities.
