Battery Storage facility on Rancho Capistrano

I have lived in Orange County since 1972. I have lived in Laguna Niguel since 1984. We were at the Rancho Capistrano when a fire broke out in July of 1985 the fire department was fighting the fire on the hills within ten minutes and the fire was heading for homes above Rancho Capistrano within ten minutes a very dangerous area and a risk for fire. If a battery storage facility is built on Rancho Capistrano there will be fires that endanger thousands of homes and a minimum of 600000 lives plus toxic cleanup that will last for decades! The bigger problem is fire department cannot put out the fire and it will have to burn out spewing dangerous hazardous chemicals into the air and into the land and into the Oso Creek watershed which drains into the San Juan Creek into the Pacific Ocean at Doheny Beach which toxic chemicals and metals will create a major disaster and there is no way to clean chemicals from Salt water that pollution will last for generations
