*Docket Number: 24-OPT-02*

**Please consider the community and ecosystem, don't build this facility**

Toxic waste. Fire potentials. Ecosystem effects. Water contamination. No thought for how this will affect the community or the environment. As we watch the battery storage facility in Monterey burn at the moment, as we see an increase in wildfires across the state, as we see more companies pulling out of the "clean energy scam" that is lithium ion batteries, we should tread carefully in the decisions we make and understand the consequences, not just think about the money we may make. Were the public and local stakeholders notified and adequately educated on the construction of this facility and its effects? Were they even notified? I'm a Laguna Niguel resident and I had no idea this was happening. I'm disappointed but not surprised that a mega church would choose profit over people. Not a good look, not an ethical or moral decision for a church.

Is there an environmental impact report?

What will happen if there's a fire nearby?

What precautions are there if it does catch on fire?

How hazardous are the fumes if it catches on fire?

What ecosystems and species will be affected by this construction? Are there endangered species nearby?
