Poor placement planning- needs review

It's hard to understand why the CEC would want to place such a dangerous storage area near flammable hillsides, a waterway, a freeway junction, heavy residential and business areas, a college and a transportation railway. Seriously.. why is this not quickly denied and relocated to a desert area that would not impact pretty much all people in south OC. Please use common sense in not allowing these types of locations and don't create another potentially dangerous battery storage facility accident that you try and fix after the fact. Do the right thing now. Thank you.
