Questions related to public endangerment concerns for 30,000 San Juan Cap residents

1. Wouldn't this project be prudent in a mostly unpopulated area that is zoned industrial vs. Residential?
2. Isn't the fire danger a concern for Saddleback Church and the nearby Mercedes Dealer and nearby residents particularly in the event of an explosive fire that must be contained by retardant chemicals vs water?
3. Wouldn't the fire result in large scale toxic particulate matter that results in human serious illness and death?
4. Isn't this site being considered related to overhead power lines that are available in less populated areas without close school and medical facility proximity?
