Hydrogen cost

Hello and good morning. Im reaching out this morning to discuss the hydrogen market and issues with the cost of the hydrogen to refuel my Mirai. The current price for the fuel is extremely cost prohibitive and is not sustainable. More support is needed in building an infrastructure that can support the current need for fuel as well as lower the cost of the fuel as well. there also should be a cap in what companies are allowed to charge for the fuel to force them to innovate new technologies that make the fuel cheaper for the consumer.
