TEST CONDITIONS

Data was recorded during steady-state rated engine speed (± 25 RPM) with full load (±2%). Pressures, temperatures, and emission rates were stabilized.

Fuel Specification:	46.5 Cetane Number, 0.035 Wt.% Sulfur; Reference ISO8178-5, 40CFR86.1313-98 Type 2-D and ASTM D975 No. 2-D.
Fuel Temperature:	99 ± 9 °F (at fuel pump inlet)
Intake Air Temperature:	77 ± 9 °F
Barometric Pressure:	29.6 ± 1 in. Hg
Humidity:	NOx measurement corrected to 75 grains H2O/lb dry air
Reference Standard:	ISO 8178

The NOx, HC, CO and PM emission data tabulated here were taken from a single engine under the test conditions shown above. Data for the other components are estimated. These data are subjected to instrumentation and engine-to-engine variability. Field emission test data are not guaranteed to these levels. Actual field test results may vary due to test site conditions, installation, fuel specification, test procedures and instrumentation. Engine operation with excessive air intake or exhaust restriction beyond published maximum limits, or with improper maintenance, may results in elevated emission levels.

DIESEL GENERATOR SET SPECIFICATION SHEET

QSK78 SERIES ENGINE, 2500-3000 kWe, 60 Hz, EPA TIER 2 NSPS CERT. (STATIONARY EMERGENCY)

DESCRIPTION

Cummins commercial generator sets are fully integrated power generation systems for stationary standby power and data center applications.

The Centum™ Series meets the demand for efficient and sustainable power with performance, flexibility and commitment – for the next generation of power.

FEATURES

Cummins Heavy-Duty Engine: Rugged, four-cycle industrial diesel delivers reliable power, low emissions and fast response to load changes.

Alternator: Several alternator sizes offer selectable motor starting capability with low reactance 2/3 pitch windings, low waveform distortion with non-linear loads, fault clearing short-circuit capability and class H insulation.

ISO 8528-5: Consult factory for site and configuration specific transient performance information.

Low NOx: Enables compliance with 6 g/bhp-hr NOx site requirements.

HVO Fuel Compatible: Approved for use with paraffinic fuels (EN15940), including Hydrotreated Vegetable Oil (HVO), which has a very low life cycle carbon emission.

Data Center Continuous: Applicable for supplying power continuously to a constant or varying electrical load for unlimited hours in a data center application.

Uptime Compliant: Meets the requirement of a Tier III and IV data center site by being rated to run for unlimited hours of operation when loaded to 'N' demand for the engine generator set.

Permanent Magnet Generator (PMG): Offers enhanced motor starting and fault clearing short circuit capability.

Control System: The PowerCommand® digital control is standard equipment and provides total genset system integration including automatic remote starting/stopping, precise frequency and voltage regulation, alarm and status message display, AmpSentry™ protective relay, output metering, auto-shutdown at fault detection and NFPA 110 Level 1 compliance.

Cooling System: High ambient and enhanced high ambient, integral, set-mounted radiator systems, designed and tested for rated ambient temperatures, simplify facility design requirements for rejected heat.

Compliance: The genset accepts full rated load in a single step in accordance with NFPA 110 for Level 1 systems. The genset is UL listed, CSA certified and is available certified for seismic application in accordance with IBC.

Warranty and Service: Backed by a standard three-year warranty and worldwide distributor network.

GENERATOR SET OPTIONS AND ACCESSORIES[5]

Engine
- 208 V and 480 V, 3 Phase, 12 kW forced-type coolant heater
- Oil sampling valve
- Redundant starting
- Closed crankcase ventilation
- Automatic oil make-up system

Cooling System (ship loose)
- High ambient standard
- Enhanced high ambient

Control Panel
- Masterless load demand
- Multiple language support
- Low coolant level warning and shutdown

Control Panel (cont.)
- Left facing mounting
- Warning high bearing temperature
- Alternator temp. monitoring
- Exhaust gas temp. monitoring
- 6x user-configurable relays
- 120 / 240 V heater control cabinet
- Mechanical hour meter
- 2x digital input/output

Alternator
- 80 °C / 105 °C / 125 °C / 150 °C rise
- 120 / 240 V, 300 W anti-condensation heater
- Top and bottom entrance boxes

Alternator (cont.)
- Temp. sensor - RTDs, 2 / phase
- Temp. sensor - alternator bearing RTD
- Differential current transformers for various voltages

Generator Set
- Battery
- Floor-mount battery tray, hold-down
- PowerCommand® network
- Remote annunciator panel
- Vibration isolators
- Standby 3yr/1000hr standard, 5yr/2500hr and 10yr/5000hr warranties
- DCC 3-, 5- and 10-year unlimited hour warranties

PowerCommand® 3.3

CONTROL SYSTEM DESCRIPTION

The PowerCommand® 3.3 is an integrated, microprocessor-based, generator set control system providing voltage regulation, engine protection, alternator protection, operator interface and isochronous governing. Refer to document S-1570 for more detailed information on the control.

AmpSentry™: Includes integral AmpSentry™ protection, which provides a full range of alternator protection functions that are matched to the alternator provided.

Power Management: Control function provides battery monitoring and testing features and smart starting control system.

Advanced Control Methodology: Three-phase sensing, full wave rectified voltage regulation, with a PWM output for stable operation with all load types.

Communications Interface: Control comes standard with PCCNet and Modbus interface.

Service: InPower™ PC-based service tool available for detailed diagnostics, setup, data logging and fault simulation.

Easily Upgradeable: PowerCommand® controls are designed with common control interfaces.

Reliable Design: The control system is designed for reliable operation in harsh environment.

Multi-Language Support

OPERATOR PANEL FEATURES

Operating/Display Functions

- Displays paralleling breaker status
- Provides direct control of the paralleling breaker
- 320 x 240 pixels graphic LED backlight LCD
- Auto, manual, start, stop, fault reset and lamp test/panel lamp switches
- Alpha-numeric display with pushbuttons
- LED lamps indicating genset running, remote start, not in auto, common shutdown, common warning, manual run mode, auto mode and stop

Paralleling Control Functions

- First Start Sensor™ system selects first genset to close to bus
- Phase lock loop synchronizer with voltage matching
- Sync check relay
- Isochronous kW and kVAR load sharing
- Load govern control for utility paralleling
- Extended paralleling (base load/peak shave) mode
- Digital power transfer control, for use with a breaker pair to provide open transition, closed transition, ramping closed transition, peaking and base load functions

Alternator Data

- Line-to-neutral and line-to-line AC volts
- Three-phase AC current
- Frequency
- kW, kVAR, power factor kVA (three-phase and total)

Engine Data

- DC voltage
- Engine speed
- Lube oil pressure and temperature
- Coolant temperature
- Comprehensive FAE data (where applicable)

Other Data

- Genset model data
- Start attempts, starts, running hours, kWh
- Load profile (operating hours at %load in 5% increments)
- Fault history
- Data logging and fault simulation (requires InPower™)

STANDARD CONTROL FEATURES

Digital Governing

- Integrated digital electronic isochronous governor
- Temperature dynamic governing

Digital Voltage Regulation

- Integrated digital electronic voltage regulator
- Three-phase, four-wire line-to-line sensing
- Configurable torque matching

AmpSentry™ AC Protection

- AmpSentry™ protective relay
- Over current and short circuit shutdown
- Over current warning
- Single-phase and three-phase fault regulation
- Over and under voltage shutdown
- Over and under frequency shutdown
- Overload warning with alarm contact
- Reverse power and reverse VAR shutdown
- Field overload shutdown

Engine Protection

- Battery voltage monitoring, protection, and testing
- Overspeed shutdown
- Low oil pressure warning and shutdown
- High coolant temperature warning and shutdown
- Low coolant level warning or shutdown
- Fail to start (overcrank) shutdown
- Fail to crank shutdown
- Cranking lockout
- Sensor failure indication
- Full authority electronic engine protection

Control Functions

- Time delay start and cool down
- Real time clock for fault and event time stamping
- Exerciser clock and time of day start/stop
- Data logging
- Cycle cranking
- Load shed
- Configurable inputs and outputs (4)
- Remote emergency stop

CODES AND STANDARDS[7]

ISO 9001 ISO 14001 ISO 45001	This product was manufactured in a facility whose quality management system is certified to ISO 9001 and its Health Safety Environmental Management Systems certified to ISO 14001 and ISO 45001.	UL LISTED	This product is listed to UL 2200, Stationary Engine Generator Assemblies.
PTS	The Prototype Test Support (PTS) program verifies the performance integrity of the generator set design. Cummins products bearing the PTS symbol meet the prototype test requirements of NFPA 110 for Level 1 systems.	EPA	Engine certified to Stationary Emergency U.S. EPA New Source Performance Standards (NSPS), 40 CFR 60 subpart IIII Tier 2 exhaust emission levels. U.S. applications must be applied per this EPA regulation.
CSA	All genset models are available as CSA certified to CSA C22.2 No. 100.	IBC	The generator set package is available certified for seismic application in accordance with International Building Code.

C2750D6E	kg (lb)	21527 (47459)	3532 (7787)	25361 (55911)

[5] All weights are approximate and represent a generator set with standard features and heaviest alternator (low voltage G-core). “As Shipped Set Weight (No Cooling System)” includes weight from engine oil. “Installed Set Weight (Wet)” includes weight from engine oil and coolant. See respective model data sheet for specific model outline drawing number that contains weights of other configurations.

GENERATOR SET DERATING FACTORS[6]

Emergency Standby Power (ESP)	**High Ambient Cooling System:** Full genset power available up to 524 m (1719 ft) at ambient temperatures up to 40 °C (104 °F). Above these conditions, derate at 5.8% per 305 m (1000 ft) and 33% per 10 °C (18 °F). **Enhanced High Ambient Cooling System:** Full genset power available up to 1022 m (3353 ft) at ambient temperatures up to 40 °C (104 °F) and 409 m (1342 ft) at ambient temperatures up to 50 °C (122 °F). Above these conditions, derate at 5.5% per 305 m (1000 ft) and 27% per 10 °C (18 °F).
Data Center Continuous (DCC)	**High Ambient Cooling System:** Full genset power available up to 1013 m (3323 ft) at ambient temperatures up to 40 °C (104 °F). Above these conditions, derate at 6.4% per 305 m (1000 ft) and 26% per 10 °C (18 °F). **Enhanced High Ambient Cooling System:** Full genset power available up to 1819 m (5968 ft) at ambient temperatures up to 40 °C (104 °F) and 911 m (2989 ft) at ambient temperatures up to 50 °C (122 °F). Above these conditions, derate at 5.8% per 305 m (1000 ft) and 31% per 10 °C (18 °F).

[6] Ambient operating temperature is defined as the air temperature measured at the turbocharger compressor inlet. Derate statements assume a cooling system with 0.25 kPa (1.0 inH_2O) backpressure and 50% relative humidity. Please contact Sales Application Engineering for operation above 3000 m (9843 ft) of altitude or outside of the temperature range in the derate statement.

RATING DEFINITIONS

Emergency Standby Power (ESP):	Data Center Continuous (DCC)
Applicable for supplying power to varying electrical loads for the duration of power interruption of a reliable utility source. Emergency Standby Power (ESP) is in accordance with ISO 8528. Data shown above represents gross engine performance and capabilities as per ISO 3046-1, obtained and corrected in accordance with ISO 15550.	Applicable for supplying power continuously to a constant or varying electrical load for unlimited hours in a data center application. Designed to comply with Tier III and IV data center site requirements by being rated to run for unlimited hours of operation when loaded to ‘N’ demand for the engine generator set.

Centum SERIES GENERATORS

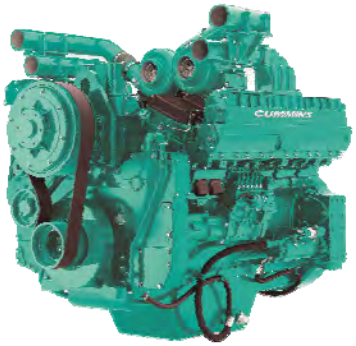
EPA NSPS Stationary Emergency Tier 2



> Specification sheet

Our energy working for you.™

Description

The QST30 Quantum series utilises sophisticated electronics and premium engineering to provide outstanding performance levels from its compact 30 litre, V12 configuration. In fact, the QST30-Series delivers more power and torque in a smaller package than any other diesel engine on the market.

CE	This engine has been built to comply with CE certification.
ISO 9001	This engine has been designed in facilities certified to ISO9001 and manufactured in facilities certified to ISO9001 or ISO9002.

Features

Quantum electronic fuel systems and controls provide superior performance, efficiency and diagnostics. The electronic fuel pumps deliver up to 1100 bar injection pressure and eliminate mechanical linkage adjustments.

CTT (Cummins Turbo Technologies) HX82 turbocharging utilises exhaust energy with greater efficiency for improved emissions and fuel consumption.

Charge Air Cooling – Utilizing an Air-to-Air heat exchanger or Charge-Air-Cooler (CAC) to reduce intake manifold temperature and to meet the lower emissions requirements.

Cast Iron Pistons – High strength design delivers superior durability.

Coolpac Integrated Design - Products are supplied complete with cooling package and air cleaner kit for a complete power package. Each component has been specifically developed and rigorously tested for G-Drive products, ensuring high performance, durability and reliability.

Service and Support - G-Drive products are backed by an uncompromising level of technical support and after sales service, delivered through a world class service network.

ASHRAE 90.1 - 2019

This product meets the minimum efficiency requirements of ASHRAE Standard 90.1 (which are based on AHRI standard rating conditions with water) and, therefore, also meets the LEED "Minimum Energy Performance" prerequisite in the Energy and Atmohphere section.

The LEED Green Building Rating System™, developed by the U.S. Green Building Council, provides indepenent, third-party verification that a building project meets green building and performance measures.

Regulatory Compliance

AHRI Certified

“Certified in accordance with the AHRI Air-Cooled Water-Chilling Packages Certification Program, which is based on AHRI Standard 550/590 (I-P) and AHRI Standard 551/591 (SI). Certified units may be found in the AHRI Directory at www.ahridirectory.org”

Summary

Data Generation Date	7/16/2024
Trane Select Assist Version Number	285

Foundation
Provide rigid, non-warping mounting pads or a concrete foundation of sufficient strength and mass to support the applicable operating weight (i.e. including completed piping, and full operating charges of refrigerant, oil and water). The expectation of Trane equipment is that piping is fully supported by an independent structure/system, without being connected to the waterbox. Once in place, the unit must be level within 1/2" across the length and width of the unit. The Trane Company is not responsible for equipment problems resulting from an improperly designed or constructed foundation.

General
Units are leak and pressure tested at 385.00 psi high side, 220.00 psi low side, then evacuated and charged.

Standard power connections include main three phase power to the compressors, condenser fans and control power transformer.

Note: A separate field supplied low voltage power source is required to power the evaporator freeze protection.

Unit panels, structural elements and control boxes are constructed of galvanized steel and mounted on a bolted galvanized steel base. Unit panels, control boxes and the structural base may be finished with a baked on powder paint.

Anytime water only is present in the evaporator, the Trane Symbio(TM) 800 controller must have flow control of the chilled water system. Flow control can be done either directly or through an input to a building automation system to conduct an action resulting in minimum flow through the chiller evaporator barrel to avoid potentially catastrophic damage to the evaporator due to freezing. If the system has sufficient glycol to protect down to the lowest expected ambient, flow control is optional.

Factory Refrigeration Charge
Packaged units ship with a full operating charge of oil and HFO-513A refrigerant.

Evaporator Temperature
Unit is designed for operation in standard leaving evaporator temperature (equal to or greater than 40.0 F.

ASME/Canadian Pressure Vessel Code
Chiller complies with ASME Pressure Vessel Code Section VIII. ASME nameplates are attached to applicable pressure vessels including oil separators.

Condenser
Air-cooled condenser coils use all Long Life Alloy aluminum brazed fin construction. The condenser will have an integral subcooling circuit. The maximum allowable working pressure of the condenser is 350 psig (2412 kPa).

Condenser Fans
Condenser fans are direct-drive vertical discharge. The condenser fan motors are permanent magnet motors with integrated drive to provide variable speed fan control for all fans. They are designed with permanently lubricated ball bearings, internal temperature and current overload protection, and customer fault feedback as a standard product offering. The fan impeller is a bladed-shrouded fan made from heavy-duty molded plastic.

Condenser Wide Ambient
Wide ambient units will start and operate between 0.0 F to 125.0 F ambient.

Sound - Invisi Sound Standard with Noise Reduction
Each variable speed rotary screw compressor will have a muffler as standard and each condenser fan will be low noise as standard.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Applicant proposed schdeule and default data.
Service area is LADWP. 2023 Carbon Intensity factor for LADWP is 499 lbs CO2e/MWh.

Land Use - Bldg floor area is 567,672 sq.ft. Site acreage is 11.55.

Construction Phase - Phases and time frames supplied by the Applicant

Off-road Equipment - Applicant data.
Use rates calculated by Consultant.

Off-road Equipment - Applicant data.

Trips and VMT - No offsite hauling per Applicant.
Vendor trip length increased to 10 miles.

On-road Fugitive Dust - Defaults assumed.

Demolition - No demolition required.

Grading - Best estimate.

Architectural Coating - Defaults assumed.

Vehicle Trips - # employees divided by the bldg sq.ft.
All other data is assumed defaults.

Road Dust - No unpaved roads will be used to service the site during construction or operations.
Defaults assumed.

Woodstoves - N/A

Area Coating - Defaults assumed.

Landscape Equipment - Defaults assumed.

Energy Use - Defaults assumed.

Water And Wastewater - Bldg and landscapign water use values supplied by Applicant.
Example: Size metric is 1000 sq.ft therefore 391200 gal/yr divided by 567.67 = 689.1 gals/1000 sq.ft.-year
Defaults assumed for sewer waste water processing.

Solid Waste - 46 tons/yr divided by 567.67 (1000 sq.ft) = 0.081 tpy/1000 sq.ft.

Land Use Change - N/A

Construction Off-road Equipment Mitigation - All equipment is Tier 4 except for the drum rollers and signal boards which remain Tier 3 (due to low rated HP values, i.e., < 50 hp).

Area Mitigation - Defaults assumed.

Energy Mitigation - N/A

Water Mitigation - City/County bldg codes will apply to these requirements.

Waste Mitigation - N/A

Operational Off-Road Equipment - N/A

See equipment HP and Load Factors in "Equipment Types" worksheet tab.

Notes:

1. Equipment types by phase derived from CalEEMod or Applicant supplied data.
2. Equipment run hours per day calculated above based upon data supplied by the Applicant.
3. Watering for fugitive dust control at a minimum of 2 times per day
4. Onsite speed will be limited to <=15 mph
5. Const phase will be serviced by only offsite paved roads
6. Trench construction times per: Southern Regional Water Pipeline Alliance, 3/08.
   Optimum trench construction progress rate is 80m (260ft) per day.
   Non-optimum trench construction progress rate is 30m (100 ft) per day.
   An average progress of 180 ft/day is used where applicable, or the applicant supplied timeframe.
7. Phase start and end months/yrs supplied by the Applicant.
8. CalEEMod defaults not used for worker estimates, etc. Applicant data indicates 100 workers per avg day.
9. 16 months at 22 days/month = 352 anticipated work days
10. Work schedule best estimates above results in 352 work days (accounting for overlaps of schedules).
11. Peak daily work force ~= 150 max month. Avg daily workforce ~= 100 (per Applicant)
12. Cut and fill will be balanced onsite per Applicant (per Project text).

Other Misc Ops Data for CalEEMod Input (Final Buildout Ops)

1. Power needs ~99 MW LADWP Carbon Intensity Factor= 499 lbs CO2/Mwh
2. Reclaimed water use for bldg cooling ~ 0 acre-feet/yr
3. Potable water use for bldg employees =~ 1.2 acre-feet/yr
   CBECS (2012), Table W1, EIA.gov
4. Waste generation rates ~ 1.15 ton/yr/employee ~= 46 tons/yr
5. OPs round trips/day: Employees = 40, Visitors = 30, Deliveries = 6
   Estimated OPs total round trips/day = (40x 1.25)+30+6 = 86
6. Landscaping water use is estimated to be ~1.3 acre-feet/yr.
   Univ. of CA., Division of Agriculture and Natural Resources (Landscape Calculator)
   Construction water use (estimated by Applicant) = 1.75 acre-ft (16 month period)
   https://ucanr.edu/sites/UrbanHort/Water_Use_of_Turfgrass_and_Landscape_Plant_Materials/
7. Ops phase will be serviced by only offsite paved roads
8. ~Total DC floor space = 567,672 sq.ft. or 567.67 x10^3
   86 avg daily round trips
   =~ 0.152 RT/day/1000 sq.ft.

There were no identified hospitals, convalescent care facilities, daycare centers, etc., within 1000 ft. of the facility boundary.

This list represents identified sensitive receptors that are located close to the site. It should not be assumed that the PMI, MEIR or MEIW will be a receptor on this list. These important HRA locations will be determined from the modeling grid and HRA output. With respect to the MEIS, this location will most likely be one of the receptors on the above list, since the list contains the identified nearfield sensitive receptors.

Cancer burden estimate: 0.000113

Cancer burden is less than District threshold value of 0.5, and will be reported as <0.5 in all text tables.

(1) Assumes population is equally distributed across the tract area.
(2) Project lies in census tract 9800.16 (06037980016)
Census Tract map ID: DC20CT-C06037
(3) 2020 census data indicates the population density in this tract is < 50 individuals per sq.mi.
(4) Tract area per Google Earth polygon mapping is ~15 sq.mi.
(5) $1x10^{-6}$ isopleth area is ~15% or 2.25 sq.mi.
