895-5191 or at Taylor.Grose@dtsc.ca.gov. QUARTERLY UPDATE Quarterly Update Period: April 1, 2024 - June 30, 2024 On May 23, 2024, PRRS submitted a revised permit application prepared in response to the third Notice of Deficiency (NOD). On June 25, 2024, DTSC issued a letter indicating that the permit application is technically complete. DTSC also made final preparations for the start of the public comment period on the draft permit decision. Quarterly Update Period: January 1, 2024 - March 30, 2024 On April 22, 2024, DTSC issued the third NOD to the facility. In addition, DTSC continued to work on the draft permit decision documents in anticipation of releasing a draft permit decision next quarter. PERMIT ACTIVITY The California Department of Toxic Substances Control (DTSC) issued a RCRA Hazardous Waste Facility Permit effective June 27, 2012, with an expiration date of June 26, 2022. FACILITY DESCRIPTION/HISTORY Pacific Resource Recovery Services Inc. (PRRS), operates a 20 acres hazardous waste treatment, storage and transfer facility (the Facility), located in the City of Los Angeles, County of Los Angeles, at 3150 East Pico Boulevard, Los Angeles, California 90023. The cross streets are Pico Boulevard and Ezra Street. The Facility and the operations of related entities occupy approximately three acres in mostly heavily industrial surroundings, zoned M3-1 by the City of Los Angeles. The current property owner is the Berg Family Trust. The facility reclaims chemical wastes generated on-site and collected from customers in the paint and coatings industry under a permit number 93-3-TS-001 issued by DTSC in 1993. PRRS is permitted to transfer, store, consolidate and recycle hazardous wastes in seven authorized hazardous waste management units which include three container storage units, five-aboveground storage tank units, and fuel blending, solvent recycling, and waste consolidation units in the operation and recycling process area. The wastes include used solvents; waste paints; spent lacquer thinner and paint spray booth filters. The hazardous waste management area occupies approximately 0.4 acre or less than 20% of the property. The Berg Family Partners, L.P. purchased the property in 1977 and leased it to their paint manufacturing and solvent distribution companies known as Ellis Paint Company and Pacific Coast Lacquer (PCL). PRRS was incorporated in April 1990, to assume the paint-related solvent recycling program from its sister company PCL, who began recycling solvent waste in 1979. In January 2011 PRRS purchased PCL system which included sales, marketing, delivery and billing and has rebranded this program under the name PRRS system. Currently, PRRS accounts for 20% of the total operating space and sales volume at the property. Ellis Paint Company, including PCL, represents the other 80%. PRRS was issued a RCRA equivalent hazardous waste facility permit in 1993. Since then, two class I and one class II permit modification were authorized by DTSC. Berg Lacquer Company has leased the premises for paint and solvent manufacturing, recycling, and distribution since August 1976. Ellis Paint Company has an automotive division under the trade name of Pacific Coast Lacquer. Both Ellis Paint Company and Pacific Coast Lacquer are fictitious business names of Berg Lacquer Company. Pacific Resource Recovery Services Inc. was incorporated in April 1990 t

Description: This former dry cleaning recycler consists of a 6,000-square-foot building on an 11,000 square-foot lot bordered by a shared driveway to the east and a neighboring facility to the west. Shop operations housed a cartridge still, a distillation still, a drum washing area, and various drum storage areas identified as permitted hazardous waste management units (HWMU). During the permit process contamination was detected on site. The permit renewal was denied. The site was abandoned. In an emergency removal 1,600 drums of hazardous waste were removed from the site by the USEPA. During the HWMU closure activities, DTSC obtained groundwater, soil and soil gas samples in a limited site investigation. The following contaminants were detected in soil, soil vapor and groundwater on and off site: acetone, benzene, n-butylbenzene, sec-butylbenzene, isopropylbenzene, n-propylbenzene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, p-isopropyltoluene, xylenes, naphthalene, perchloroethylene (PCE), and trichloroethylene (TCE). Soil gas samples using TO-14 and TO-3 methods detected the following compounds: 1,2-dichloroethane, trichlorofluoromethane, benzene, ethyl benzene, chlorobenzene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, toluene, p,m-xylene, o-xylene, TCE, PCE, and total volatile petroleum hydrocarbons (TVPH). Among the detected compounds in the soil gas, PCE and TVPH were detected at significant levels. The maximum detected concentrations for PCE and TVPH are 10,454 and 69,311 ug/l respectively. Groundwater underneath the AAD site is also contaminated by volatile organic compounds (VOCs). Six groundwater monitoring wells were installed to

determine the groundwater flow direction and whether AAD contributed to the groundwater contamination. Initial groundwater monitoring samples detected PCE as high as 33 micrograms per liter (ug/l) and TCE as high as 565 ug/l. In May 2003, an interim removal action began with the installation of a soil vapor extraction (SVE). The SVE system was designed to remove VOCs, however, as of December 2006, an estimated 918 pounds of PCE and 11,559 pounds of TPH vapor had been removed. Continued monitoring determined that the SVE system needed a redesigned to address potential indoor air issues. In 2007, a limited time critical removal of soil and concrete was conducted because PCE was detected as high as 3,000,000 ug/kg in the building at the former operations area. 123 cubic yards of shallow soils were removed from inside the building. Additional shallow soil vapor probes were installed and the system continued operations until December 2010. From October 2007 to December 2010 a estimated total of 159 pounds of PCE was treated. The concentrations of PCE decreased to 63 ug/l. A focused HHRA determined future commercial on-site worker receptor as  $3.1 \times 10^{-6}$  and non cancer risk as less than 1.0. Groundwater contamination is considered to be originating from an offsite source in that TCE and perchlorate are major identified COCs. In 2015 Perchlorate was detected as high as 5,000 ug/l. On-site soil vapor monitoring detected an increase in subslab vapor samples triggering a need for further action to prevent indoor air intrusion. A final remedy for the site - an indoor air intrusion mitigation plan was proposed and approved in 2017. The RAW proposed the application of a vapor barrier and a passive sub-slab venting. Responsible party identification activities has resulted in 7 signed consent decrees. On January 23, 2020 Land Use Covenant (LUC) was recorded. This LUC prohibits activities such as drilling, extraction or removal of groundwater and soil disturbance. The Removal Action completion Report (RACR) (AECOM, November 6, 2020) describes the implementation of a final remedy, which includes the installation of a vapor barrier and a passive subslab soil vapor venting system to mitigate potential intrusion of tetrachloroethylene into the interior environment of structures. The RACR recommends to implement a land use covenant that requires DTSC approval for any proposed building or property modifications and to develop an Operation and Maintenance Plan to protect the integrity and effectiveness of the vapor mitigation measures.

Background Info: The AAD property, formerly a dry cleaning recycler, consists of an 11,000 square-foot lot with a 6,000 square-foot building. Offices are partitioned in the northern portion of the building and the remaining area is a concreted floored shop/warehouse area. The shop area was used to house a cartridge still and PCE distillation still in the area known as the hazardous waste management units (HWMUs) (a.k.a. Containment A); a drum washing area, and various drum storage areas (Areas B, C and D). A parking lot is located at the eastern side of the building and it is covered with asphalt. The parking lot is shared between AAD and its adjacent neighbor, the former Rite-Choice facility. The Department of Toxic Substances Control (DTSC), Southern California Permitting and Corrective Action Branch (SCPCAB) permitted the facility to manage dry cleaning wastes since 1986. In 1991, AAD submitted a permit renewal application. As part of the permit review process AAD conducted soil, soil vapor and groundwater investigations. Several documents and inspection reports indicated releases of hazardous waste at AAD. In November 1994, a soil vapor survey was conducted and PCE contamination was evident. In September 1996, a unilateral corrective action order requesting AAD to conduct a site wide investigation and remediation was filed. An Interim Measures Workplan was approved in 1999. Soil vapor probes were installed as interim measures by AAD to determine the extent of contamination and the preliminary soil vapor results were collected. The interim measures were not completed by AAD. The permit renewal application review also indicated that there were many deficiencies in the permit application and these deficiencies were not addressed by AAD. AAD's permit was revoked in November 2000. In December 2000, AAD was abandoned by its operator with approximately 1,600 drums of hazardous wastes at the site. These drums were later removed by the United States Environmental Protection Agency's (USEPA) Superfund Emergency Response staff. The operator of AAD, Harry Pourat, is now deceased. The present owners of the property are two unclaimed trusts based in Oregon. At least one appears to be a revocable trust. The principals were two elderly ladies living in Oregon who have died. It appears that the beneficiaries have not taken possession of the facility. The attorney for the trusts is uncooperative and has stated that the trusts refuse to conduct closure or to be responsible for any costs of closure and corrective action. In the absence of an operator and landowner, SCPCAB requested assistance from the Office of the Attorney General to determine if there were any Potentially Responsible Parties (PRPs) to remediate the site. SCPCAB identified the landowners and approximately 3,700 small generators who shipped the PCE waste to the AAD site as PRPs. On October 23, 2003, the Office of the Attorney General concluded that there are no viable PRPS that can be pursued at this time. In Spring 2003, SCPCAB implemented the approved closure plan by using closure insurance funds. During the HWMU

closure activities, SCPCAB obtained groundwater, soil and soil gas samples in a limited site investigation. Contaminants detected in the soil include: acetone, benzene, n-butylbenzene, sec-butylbenzene, isopropylbenzene, n-propylbenzene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, p-isopropyltoluene, xylenes, naphthalene, perchloroethylene (PCE), and trichloroethylene (TCE). Soil gas samples using TO-14 and TO-3 methods detected: 1,2-dichloroethane, trichlorofluoromethane, benzene, ethyl benzene, chlorobenzene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, toluene, p,m-xylene, o-xylene, TCE, PCE, and total volatile petroleum hydrocarbons (TVPH). The maximum detected concentrations for PCE and TVPH are 10,454 and 69,311 ug/l respectively. Groundwater was sampled from six groundwater monitoring wells. The first and second quarterly groundwater monitoring samples detected PCE as high as 33 micrograms per liter (ug/l) and TCE as high as 565 ug/l. In May 2003, an interim removal action began with the installation of a soil vapor extraction (SVE). The SVE system was designed to remove VOCs, however, as of December 2003, an estimated 736 pounds of PCE and 7,171 pounds of TPH vapor had been removed. TPH had not previously been identified as a contaminant of concern and sources had not been determined. However, it is known the previous owner of AAD accepted dry cleaning and gas station waste products for recycling. The dry cleaning waste would stay on site and the gas station waste would be segregated to the neighboring facility Rite-Choice. In December 2004 AAD was transferred to the Site Mitigation Program. Proposed actions include: preparation of a Site Characterization Workplan that shall include soil, soil gas, indoor air and groundwater; monitoring all soil vapor and groundwater wells; and the drafting of a Site Characterization Report and Baseline Health Risk Assessment. Due to the vapor diffusion, the air samples collected from three facilities located near the AAD site exceeded the screening criteria proposed by USEPA. There are currently approximately 20 workers exposed to the indoor air contamination at these three facilities. Therefore, additional additional soil vapor monitoring shall be conducted. Drinking water production wells are located approximately 1000 feet south of the facility. The migration of the contamination to the production wells may occur; therefore, groundwater monitoring shall be continued. There are approximately 44,000 workers in the city of Vernon. Based on the current investigation results, AAD may not be the only contributor to the contamination found in soil, soil gas and groundwater. Further investigation is needed to determine the additional potentially responsible parties.

Quarterly Update: Update 3/10/23: 1) DTSC's cleanup program has determined that groundwater contamination is not from AAD operation 2) Soil vapor extraction work has been completed 3) Final Remedy has been completed. The Removal Action completion Report (RACR) (AECOM, November 6, 2020) describes the implementation of a final remedy, which includes the installation of a vapor barrier and a passive subsurface soil vapor venting system to mitigate potential intrusion of tetrachloroethylene into the interior environment of structures. The RACR recommended implementation of a land use covenant that requires DTSC approval for any proposed building or property modifications and to develop an Operation and Maintenance Plan to protect the integrity and effectiveness of the vapor mitigation measures. On January 23, 2020 Land Use Covenant (LUC) was recorded. This LUC prohibits activities such as drilling, extraction or removal of groundwater and soil disturbance. Based on this information, this facility is deemed closed. Background: This is an inactive facility undergoing closure by PCAD and corrective action by OMF: AAD was permitted as a hazardous waste facility in 1986 to store and treat dry cleaning related wastes generated by the dry cleaning businesses. In January 2001, DTSC's Southern California Permitting and Corrective Action Branch (SCPCAB) revoked AAD's permit and ceased its effort to process the permit renewal application due to AAD's repetitive and serious violations. In December 2000, AAD was evicted from the premises and abandoned the facility with hazardous waste left on site. The facility's operator is deceased and the co-operator, the owner's brother, is in prison with no available assets. DTSC is closing the facility using the insurance funds from the evicted facility operator. DTSC conducted the soil investigation and detected perchloroethylene (PCE) and total petroleum hydrocarbons (TPH) as major constituents of potential concern at AAD. The highest concentrations of PCE and TPH are found approximately at 50 feet (shallow zone) and 130 feet (deep zone) below ground surface, respectively. Based on a pilot study, a carbon adsorption soil vapor extraction was designed to remediate the PCE and TPH. The system consists of: 1) soil vapor extraction system, 2) an air-water

separator, 3) a vacuum blower, 4) heat exchanger, 5) carbon adsorption vessels, and 6) a control system. DTSC has been operated the SVE system since April 2003. DTSC also conducted the groundwater investigation with the grant given by USEPA and concluded that the groundwater was not impacted by the AADi++s past operations. Due to the budget constraint, the project was transferred to OMF to continue the site remediation.

Comments: A drain was observed approximately 3 feet east of sample location B19. Originally, sample B19 consisted of a soil sample location and B22 consisted of a soil and soil vapor sampling location. B19 will now consist of a soil and soil vapor sampling location and B22 will only have soil sample location, the change will place a soil vapor sample location on B19 which lies close to the newly observed drain/sump. The mobile lab is projected to sample on 11/9/19. The facility layout has now changed since the original layout of the former Armoloy facility was submitted. Layout of the facility now consists of four rooms to the west, an open storage area to the southwest, a restroom to the southeast, and access to the second floor from the southeast corner.

Quarterly Update: Updated:8/24//23: Armoloy of Southern California Inc was an interim status (ISD) facility that never received a treatment, storage, disposal (TSD permit). The facility went out of business on January 31st 1983. The closure of this facility was deferred to Corrective Action under DTSC's Site Mitigation and Restoration Program (SMRP). The Facility was approximately 0.1 acre in size and is located just east of South Grande Vista Avenue and is located in a mixed industrial and residential area. Subsurface investigations were performed at the property on February 1999 and October 2014. Concentrations of VOCs, hexavalent chromium, and cyanide was detected in shallow soil samples taken during the investigations. Subsurface Soil Investigation and Supplemental Soil Investigation reports, dated March 12, 1999 and November 4, 2014, respectively, were reviewed by DTSC. The reports describe prior investigations performed to characterize the presence and extent of contamination at the former facility. Based on evaluation of the data and information concerning the former Armoloy facility, DTSC does not concur with the report's recommendations and conclusions. DTSC requires further characterization to allow assessment of the nature and extent of contamination at the former Armoloy facility and to allow development of an adequate human health risk assessment. An RFI Workplan dated October 2019 was submitted to DTSC for review, in response to DTSC previous letter, and implemented shortly after. The corresponding RFI Report dated December 2019 and Human Health Risk Assessment (HHRA) dated March 5, 2020 presented investigation results and an assessment of potential health risks from contaminants identified at the facility, they were approved in a letter dated April 14, 2020. DTSC determined that the property is not suitable for unrestricted land use and that a Land Use Covenant is necessary to restrict the former Armoloy facility to commercial/industrial use. The land use covenant was recorded at the Los Angeles County Recorder's Office on December

| Quarterly Update:                  | QUARTERLY UPDATE Quarterly Update Period: April 1, 2024 - June 30, 2024 Permitting activities Class 1 Modification: On January 15, 2024, US Ecology Vernon, Inc. (USEV) informed DTSC of a request for a Class 1 permit modification of the August 23, 2017, permit (Permit modification #8). The modification falls within the requirements of Class 1 permit modifications and does not require DTSC's approval, so long as the changes meet the requirements of the Appendix I to Title 22 CCR 66270.4. The changes requested are to replace Tank 49A and Portable Media Tanks 1,2, and 3 (PMT1, PMT2, PMT3), activated carbon, water polishing treatment containers with 4 in-kind containers. These containers are of the same size, and equal or higher design standards than the existing equipment. Additionally, the Facility Contacts within the Contingency Plan are being changed. USEV mailed a public notice of these changes to the mailing list on April 11th, 2024. Upcoming Permit Renewal Pre-Meetings: On July 9, 2024, DTSC issued a reminder letter package to USEV for the upcoming permit renewal. FACILITY DESCRIPTION/HISTORY US Ecology Vernon, Inc. (USEV) operates a hazardous waste treatment and storage facility located in Vernon, Los Angeles County, California. The facility is categorized as a large treatment and storage facility. USEV owns and operates the facility while leasing the land as a tenant from the real property owner, AMB Vernon Industrial Park LLC. The facility began operations in 1942. The wastes are treated by a series of chemical and/or physical processes to destroy or remove hazardous constituents or hazardous characteristics. The residues from this treatment are either recycled on-site, or shipped off-site to an appropriate facility. The treated waste water is discharged to the Publicly Owned Treatment Works (POTW) industrial sewer system operated by the Los Angeles County Sanitation District. Previous operators of the facility included Norris Industries, Inc., NI Industries, Norris Environmental Services, US Filter Recovery Services, Siemens Water Technology Corporation, Siemens Water Technologies LLC, and Evoqua Water Technologies LLC. PERMITTING REGULATORY DESCRIPTION/HISTORY USEV's first hazardous waste facility permit was issued in 1996 and expired in 2006. The permittee |
