Risk of fire

As a parent of children who attend a nearby school, I am concerned about a lithium battery plant being built in an area that is at risk for wildfires. This recently occurred in Moss Landing and has put the residents at risk of exposure to hazardous materials. There are several schools and residences within a few miles of this location. It is absolutely a hazard and should be moved away from where people reside. I plead you to consider the children who would be exposed and reconsider the location.
