Another Voice with Concerns

While I understand the need for advancements in energy infrastructure, I do have some reservations regarding the proposed lithium energy storage system adjacent to our neighborhood. My primary concern centers on the potential impact to our community's safety and quality of life, specifically regarding fire risk and toxic gases from thermal runaway. I respectfully request the CEC to complete their thorough and transparent assessments of these potential impacts and ensure their decision on the approval of ENGIE North America's application is predicated upon protecting the well-being of San Juan Capistrano residents.
