Compass Energy Storage Project

I am writing to oppose the construction and use of the 13 acres of land near Camino Capistrano and Interstate 5.

Have you even been to this location ?? It is literally yards away from the freeway which is very heavily used-day or night. And if I am correct this "13 acres" is tucked away in close proximity to the mountain range that parallels the freeway. On top of this mountain range sits the city of Laguna Niguel. This mountain range also has vegetation on it. You are telling me that this piece of property is a good choice for a Lithium battery storage facility ? This area is densely populated and is a very high risk for fires. In implementing this project I can see destruction facilitated by fire fire and fire. We as Californians are always asked to be prudent - to act with care, caution, and good judgment especially in managing practical affairs and avoiding unnecessary risks in preventing fires of any kind.

This project is totally opposite of that statement.

Is there no where else in Southern California that this wouldn't be a better fit ? How about Baker(482 population), Barstow(2,4964 population), Boron(2,627 population), Needles(4,824 population) .Just to name a few.

And you have picked a location with a population of 62,899 and a freeway that is impacted each and every day.

In summation, please reconsider the consequences of your actions and the detriment of the constituents of this location.
