Oppose this highly dangerous battery storage facility

This proposed facility is at the bottom of a hill. At the top of this hill is an entire large community of homes in Laguna Niguel. Should a very dangerous fire break out at this lithium battery storage facility, the fire would race up this hill and burn hundreds of homes. Haven't we learned enough about fires from the L.A. fires this year?? There is plenty of unused barren land in SoCal nowhere near houses which could be used for such a facility. Putting it in this location is a serious threat to Laguna Niguel residents..
