Please Approve Compass Energy Storage Project

Please approve the Compass Energy Storage project. It represents a significant improvement in the local power grid reliability, providing a buffer for the community. By storing energy produced when renewable sources are generating it reduces greenhouse gas production and helps us in the fight against climate change.

No project is without risks, but by using Lithium Iron Phosphate (LFP) chemistry batteries this project mitigates the thermal runaway conditions that can lead to fire. Concerns over the visibility have been addressed by the proposed landscaping plan to conceal the site, if native plants are used it would further provide a huge boon to local biodiversity.

This project represents a huge opportunity for the local community to improve resilience, smooth issues in energy demand, and help protect the environment. Please approve it.
