Subject: Additional information Regarding NCE Notifications #2025-001, #2025-002

Bruce,

This memo provides supplementary information regarding the Non-Compliance Event Notifications (Part I) submitted on January 7 and 8, 2025. These reports pertain to two test runs conducted on RPEAK Combustion Turbine #5 (CT5) following concerns about el

Background

The test runs aimed to address and retest the high ammonia slip emissions observed after implementing a new ammonia correction factor (0.339). This correction factor, derived from a Relative Accuracy Test Audit (RATA) performed by Montrose Environmental, resulted in unexpectedly high slip readings post-installation on July 30, 2024.

Test Details

Test 1: January 7, 2025 (2-Hour Run)

The initial delay in retesting was due to operational challenges:

- On **September 15, 2024**, Pacific Gas and Electric (PG&E) reduced gas pressure to 370 psi, rendering the unit inoperable (minimum operating pressure is 400 psi). Normal gas pressure resumed in **December 2024**.
- During this downtime, **rodent damage** was discovered signal and control wires on the unit had been chewed through. The damaged wiring was replaced, and the January 7 test confirmed successful repairs.

Test 2: January 8, 2025 (6-Hour Run)

Montrose Environmental conducted a six-hour test run, measuring NOx and ammonia slip. Results were consistent with the elevated ammonia slip readings recorded on **September 3, 2024** (refer to Non-Compliance Events #2024-20, #2024-021, and #2024-022).

Next Steps

1. **Ammonia Correction Factor Updates:**
Montrose Environmental is finalizing the updated ammonia results and correction factor, expected within 1–2 weeks. Once received, Roseville staff will:
 - Input the new correction factor into the Data Handling System (DAHS).

- Recalculate the data and forward updated results to the Placer County Air Pollution Control District (PCAPCD).

2. **Maintenance Plans:**

Before the current Variance expires on **January 30, 2025**, Roseville staff will:

- Perform cleaning and balancing of the ammonia injection grid to improve ammonia catalysis efficiency.

We will continue to monitor the situation closely and provide timely updates as new information becomes available.

You are requesting that the District not take enforcement action because the Non-Compliance Event is the result of an "Upset / Breakdown" Event under District Rule 404. A breakdown condition means an unforeseeable failure or malfunction of 1) any air pollution control equipment or related operating equipment which causes a violation of any emission limitations or restriction prescribed by the District Rules and Regulations, or by State law, or 2) any in-stack continuous monitoring equipment, where such failure or malfunction: (1) is not the result of neglect or disregard of any air pollution control law or rule or regulation; (2) is not intentional or the result of negligence; (3) is not the result of improper maintenance; (4) does not constitute a nuisance; (5) is not a recurrent breakdown of the same equipment. You have the burden of providing sufficient information to demonstrate that the Upset / Breakdown was an unforeseeable equipment failure or malfunction that meets the above listed criteria. This checklist must be completed and returned to the District with either the Part 1 or Part II Non-Compliance Event Notification form to attest to your having made this determination. Submission of a request for shielding from enforcement action does not by itself confer such a shield. If breakdown or emission exceeding operations continue after the breakdown or emission exceedance is identified, the possibility exists that the District after consideration of the information provided, the timeliness and completeness of the submittals, and a comparison to other like breakdowns, may ultimately determine that the Non-Compliance Event was not the result of a legitimate Upset / Breakdown event and may elect to take enforcement action. Action to return to compliance should be accomplished as expeditiously as possible. Thus, you are advised to: (1) assure that the breakdown meets the criteria for an unforeseeable failure or malfunction; (2) minimize emissions resulting from the event to the maximum degree possible; and (3) assure that the required failure and malfunction information and information on the corrective actions taken is provided to the District in a complete and timely manner.

Subject: Additional information Re: NCE #2025-003, #2025-004, #2025-005

Bruce,

This memo provides supplementary information regarding Non-Compliance Event Notifications #2025-003, #2025-004, and #2025-005 submitted on January 23rd and 28th, 2025. These reports pertain to test runs conducted on RPEAK Combustion Turbine #5 and #6 (CT5, CT6) during Variance #2024-06 which expires January 30th, 2025. These test runs occurred after a follow-up Source Test performed by Montrose Environmental, Inc. produced an "improved" Ammonia Correction Factor of 0.203, from 0.339 on CT5.

Background

The test runs aimed to tune and optimize the performance of the ammonia injection grid of both units. During the test period, 8-hour runs were scheduled on January 23, 24, 28, and 29. There were three Non-Compliance Events during that period.

NCE #2025-003

January 23, 2025, CT5

During the initial startup, CT5's ammonia blower motor "A" failed to start which caused a delay in initiating the ammonia injection. The backup blower motor was started after a brief delay, but the NOx emissions totaled 7.29 Lbs. for the startup, exceeding the permit limit of 3.1 Lbs. Condition #35 of Permit No. REPR-20-03. The failed motor was replaced from spare inventory by Roseville staff and tested on the following run.

NCE #2025-004

January 23, 2025, CT5

Following the blower motor failure, CT5 was successfully restarted and operated throughout the afternoon while grid tuning was performed. The unit continued running as scheduled until the planned shutdown at 18:00.

At approximately 17:36, the computer operating system's alarm page populated with numerous "Bad Quality" alarms. Among these alarms, some indicated the Demineralized Water Storage Tank had reached a Low-Low (empty) condition, causing the forwarding pumps to shut off. This, in turn, terminated the water flow to the turbine, essential for NOx control.

The immediate troubleshooting performed by Roseville Instrument Technicians confirmed the Programmable Logic Controller (PLC), which controls the balance of plant functions had briefly lost communications and was reset.

The unit was immediately given a stop command, and the turbine disconnected from the grid. This sudden trip caused a spike in NOx emissions exceeding Conditions 34a, 34b, and 35a. ii.

NCE #2025-005

January 28, 2025

Lastly, CT6 was started on January 28th at about 13:10. After about 10 minutes of run time, an alarm was produced for High Temp in Turbine Package, causing a turbine to unload at about 13:20.

A Roseville Operator checked the Turbine Motor Control Center (MCC) and found the Turbine Package Ventilation Fan HOA (Hand-Off-Automatic) switch was in the OFF position. He immediately turned it to Automatic, causing the fan to start, and initiated cooling off the turbine package compartment. This action prevented a full turbine unload, with output briefly dropping to 0.2 MW before recovering to full load.

As a result of this excursion, NOx emissions exceeded limits, reaching:

- 4.31 lbs./hr.
- 5.2 ppmvdc

The HOA switch in the wrong position was determined to be a human error.

The prestart checklist has been updated to highlight the importance of the HOA positions.

CRR-13

CRR-13: The project operator shall provide an emissions reporting protocol to the CPM for review and approval. The emissions reporting protocol shall explain the procedures for estimating criteria pollutant emissions during emergency operation and reliability testing. The protocol shall list the calculation methodologies, operational parameters used to quantify emissions (e.g., fuel flow, gross calorific value of fuel, predetermined emission factors, water injection, megawatts, etc.), and any assumptions made in the estimate. The protocol shall be submitted at the end of each operating quarter for approval. Upon approval of the protocol, the operational emissions shall be reported using and presenting the same calculation methodologies, operational parameters and assumptions used to quantify emissions. Emissions shall be reported to the CPM quarterly. In addition to emissions reporting, the reported data shall include fuel use, hours of operation and times of operation, and energy produced by that use and operation.

(CEC 1304 reflects fuel use & energy produced)
