Ban the use of this property for lithium battery storage

I have lived in Laguna Niguel for nearly 40 yrs and have never suspected that something like this would ever happen.

This French Company is trying to build a facility that would endanger all of our lives, being evacuated due to fire hazard, or toxic fumes.

The impact of a fire from these lithium batteries would shut down the freeway 5, and cause toxicity to the nearby creek water, and have the local high school evacuated.

I suspect that this facility initially will be used for storage but later converted to an energy source to be used by the local utility company hooking up through the transmission lines located on the property.

This company is out for their financial benefit and ignore the public safety.

As we have seen these storage facilities have caught on fire, so please ban the use of this property for their financial gain.
