## **Compass Energy Storage Project #263263**

I am strongly opposed to storing lithium batteries in south Orange County. The plan puts a densely populated area of residents directly in danger. Lithium batteries are known to be unstable and highly flammable. There is a long track record of fires started by these storage facilities. They do not belong in this crowded urban area. Putting a known fire risk in an area with high risk of wildfires is dangerous. The results of the fires at the battery storage near Monterey, California demonstrated toxic soil, air, and water within 25 miles of the facility - as far as they measured. This type of facility needs to be in a rural area with very few or no people and a low risk of wildfire. Also, it's vitally important to learn how to minimize the dangers of these storage plants before building more. Do not allow this project #263263 to proceed. Thank you.
