SUBJECT PRELIMINARY COMPLETENESS REVIEW

Dear Ms Segner

Reference is made to your applications for Authority to Construct/Permit to Operate of a power generating plant consisting of two gas turbine power stations (Application Nos 973880 and 973881) to be located near the corner of Alta Road and Otay Mesa Road, San Diego, CA. Please be advised that the following additional information is necessary to complete the processing of this application:

- 1 Please submit sample calculations for estimating maximum emissions. Please summarize all assumptions made (e.g., maximum natural gas usage, specifically which manufacturer's data used, etc.)
- 2 A more detailed modeling analysis must be performed for PM<sub>10</sub> emissions (i.e., it will show that the air quality impact will be less than 5 µg/m<sup>3</sup> and that the project will have no significant impact on the environment).
- 3 Prior to the issuance of the Authority to Construct, a more detailed and quantitative summary of the source and amount of emission offsets must be provided.
- 4 As soon as available, please submit the make, model, power rating, serial number, etc. of the turbines to be installed. Also, please include data regarding the release parameters (stack height, exhaust flow rate, etc.)

This required information was identified in an expedited manner and represents a preliminary determination. Final completeness will be determined within 30 days of application receipt (August 23, 1999).

If you have any question regarding this letter, please call me at (858) 694-3606.

Sincerely,

Arthur Carbonell  
 Air Pollution Control Engineer
