*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This resource is a grouping of a Quonset hut (at right) and a series of garages. The Quonset hut was converted to use as a religious building; its signage reads "Pentecostal Church." In alignment with the Quonset hut, there is a row of eight double-width garages, each with stucco siding, low-pitched gabled roofs and wide, garage door openings. Based on aerial map research, there were once approximately 50 of these structures aligned in parallel rows.

Area Desert Center

Period of Significance ca 1942 Property Type Residence

Applicable Criteria N/A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Based on aerial map research, there were once approximately 50 of these structures aligned in parallel rows. Little is known about this property. Based on the building type and map information, the Quonset Hut likely dates to circa 1942 and was perhaps once part of Camp Coxcomb or Camp Young, Desert Training Center which operated until 1944 (Point of Historic Landmark 1968). The garage buildings likely date to roughly the same period. When the training center closed, Desert Center secured several of the military buildings for use in the community. It is assumed that the Quonset was used as a Pentecostal Church.

Although this property played a role in the growth of the area, it is not known to be directly associated with events that have made significant contributions to the history of Desert Center and therefore does not appear to meet NRHP Criterion A or CRHR Criterion 1. The property does not meet NRHP Criterion B or CRHR Criterion 2 for association with people who have played a significant role in the history of the region. Architecturally, the Quonset hut as a utilitarian building and the garages are a modest example of their type. In addition, the physical condition of the property is poor as the buildings have suffered extensive deterioration. It does not meet NRHP Criterion C or CRHR Criterion 3. Because these buildings appear to have been moved, it is unlikely that there would be important subsurface information yielded to be eligible under NRHP Criterion D or CRHR Criterion 4. Overall, the property does not appear to meet any of the criteria for listing in the CRHR.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

P-BE-007 is the No. 1 Eagle Mountain – KEM Transmission Line. The 33kV line consists of overhead transmission cables carried by single utility pole structures composed of wood. Each pole contains one to three cross-arm beams near the top of each structure. The line measures approximately 4.3 miles north-south and runs between the community of Eagle Mountain and the Eagle Mountain Pumping Plant. Initially built ca. 1950, it served as part the Eagle Mountain infrastructure.

B9. Architect: Unknown b. Builder: Unknown

*B10. Significance: Theme Industrial Development

Area Eagle Mountain

Period of Significance ca. 1950 Property Type Transmission Line

Applicable Criteria N/A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In the late 1940s, Kaiser established the Eagle Mountain Mining Company 11 miles from Desert Center. The mine included a company town supporting dozens of employees and their families. The operation of the mine from the late 1940s to early 1980s (when the mine closed) impacted the local community of Desert Center. The transmission line, along with the parallel No. 2 Eagle Mountain – KEM Transmission Line (P-BE-008), was built ca. 1950 and provided utilities in the operation of the Eagle Mountain complex. Eagle Mountain is significant under NRHP Criterion A and CRHR Criterion 1 for the major impact it had on the region during its operation between 1948 and 1982. Although the transmission line is associated with Eagle Mountain, it served a commonplace function and did not specifically contribute to the historical significance of Eagle Mountain. The No. 1 Eagle Mountain – KEM Transmission Line does not appear to qualify for listing under Criterion A of the NRHP or Criterion 1 of the CRHR. It is also not known to be associated with significant persons in the area, and therefore does not appear to qualify under Criterion B of the NRHP or Criterion 2 of the CRHR. As a standard single-pole wooden transmission line, it does not appear to qualify as significant or unique in the distinctive characteristics of a type, period, or method of construction. Therefore, it does not appear to meet Criterion C of the NRHP or Criterion 3 of the CRHR. Under consideration of all criteria, the transmission line does not appear to meet the criteria for listing in the CRHR individually or as a contributor to a potential district.
