Docket Number: 08-AFC-08A

Support HECA project

To whom it may concern,

My name is Thomas Judge and I am writing to voice my support for the Hydrogen Energy California project. Opponents criticize the project for revising their original plans but I don't get why. All the news coverage I've seen since this project gained popularity, basically says that they had to figure out a way to make money otherwise the project couldn't happen - which is a project that California really needs. What's wrong with making the plant better? They assessed our county's needs and incorporated it into their plans. Now, because of their revisions, HECA will provide farmers with a local option for fertilizer. What's even better is that their fertilizer will have a low carbon footprint compared to most other fertilizer options and they won't be using the really volatile stuff that was at the facility in Texas. I think the people that oppose HECA are just afraid of change. I get it, but the world is moving on and we have to help out our future generations by allowing projects like this to find new ways to make energy that doesn't contribute to global warming. I ask that you approve and permit HECA our future generations will thank you.
