## **AES Power Plant in Redondo**

I strongly support rebuilding the AES power plant in Redondo Beach at its current location.

Californians live in a something for nothing world that ultimately can't work. There really isn't any free lunch.

Shutting down nuclear power plants and old outdated power plants may make sense but not replacing them doesn't. California is a huge importer of power now yet it advocates the introduction of electric cars to reduce pollution and electric heat sources to replace burning fuel in industrial processes. Their policy is to build any new power plants far from the users (apparently at least one state away) resulting in very large line losses on the resulting huge energy transmission requirements. Wind and solar sources may add to our in California production of power but when the wind isn't blowing and/or the sun not shining, local power generation at the user is going to be required.
