## **My Suppoort**

Staff of the CEC

I am writing in support of the HECA. I think their concept to reuse the gasified solids instead of disposing of them. In fact, none of the plants slag will be disposed of in Kern County. I was curious about their plans for reuse and found out that HECA conducted a study on how to efficiently reuse the products left over from the gasifying process. It turns out that they can be used for roofing granules, blasting grit, cement and ready mix. All of which will be sold in no more than 300 miles of Kern County, further benefitting the Central Valley. This is a prime example of how business should be done. Businesses and related industries have to work together to find ways to combine their waste streams and take care of the environment while conducting their business. This project needs to be permitted!
