## **No New Power Plant Please**

To Whom it May Concern,

My family and I live within about a mile of the existing power plant, and without a doubt, would be extremely thankful if it was torn down without plans for a new plant. I am not sure why a new plant is needed. As it stands now, the existing plant hardly runs. Given California's push towards more energy efficiency, it seems unlikely that a new power plant would be of much use if the current one hardly runs. Also, if a new plant does not need the ocean to cool, it makes more sense to move the plant (if actually needed) to an area less populated. To put a new power plant in this location is a bad idea for the personal health of the population and financial health of the area. Without a plant to add pollution to the air, the LA Basin and Redondo Beach would be that much cleaner. This would help with the health of everyone in the area. Financially, it would be beneficial to remove such an eyesore from the area and allow tourism and property values to increase. When this plant was originally planned and built, the area was nowhere near what it is today. This is a major opportunity to better this area and improve the lives of all that live and work in this area. Please deny AES the ability to build a new plant.

Thank you,

Colin Langsdale
