*Docket Number: 12-AFC-03*

### **Approval of the Application by AES is not in the best interest of RB**

1. I understand that an independent consultant analysis has determined that the electrical power generated at the RB site is not necessary to insure the present and near future requirements of the local and state demands.
2. The power plant installations and ancillary equipment is not compatible with the prime coastal area in which is located unless it is absolutely necessary.
3. A combustion power plant in proximity to a dense populated area is at best an environmental health risk due to the combustion byproducts even if the fuel is natural gas.
4. A power plant installations and its ancillary equipment is a negative factor in the real state value of the neighborhood.
