Docket Number: 12-AFC-02

Why natural gas in Huntington Beach? Why Not Preferred Alternatives?

Huntington Beach does not need another natural gas plant.

The region and air quality in the area is polluted enough.

The California Public Utilities Commission has recently been shown to have colluded improperly with utility industries. But they continue procure polluting fossil fuel resources and then the CEC forces the plants on communities. Why? Who was Peevey working hardest for?

The CEC should do a much more thorough study of environmental superior alternatives.

The CEC commissioners should use greater foresight in the environmental impacts for the decades to come, and the opportunity costs lost of opening this up to better, cleaner alternatives.

Better if local companies could provide clean energy, boosting the local economy and helping the climate and public health.

We could and should be doing much better.

The California Energy Commissioners should be ashamed they're trying to fast-track dump this polluting legacy in

Huntington Beach behind 125-foot surfboards

for decades to come.

Please reconsider this plan immediately. The CPUC confirms fast-ramping gas-fired capacity isn't needed in 2015 in the L.A. Basin. The CPUC hasn't said when it will be. So there is no hurry. Commissioners McAllister and Douglas are looking Peevey like in this situation. This brings up many questions.

Please take your time and thoroughly weigh appropriate CEC Environmental Superior Alternatives against HBEP.
