Performance Software and Registry Comments for April 10 meeting

Please allow for Signature Agreement Authorization "Signoff" for the CFIR registry by the Energy Consultant which was allowed in the 2008 code but not in the 2013 code. This has been a difficult process for everyone and especially the builder/architects who need to signoff on the CFIRs. I have to instruct them every time how to signoff the project even after several times of doing it. Many times they forget their password and can't find it. Some projects are delayed a week because of this process.

Also, please include metal framed roofs and floors in the performance software.
