Place to put massive solar panels

Hi, I suggest that a roof like system be placed over the center of California's Highway I-5 that would be covered with solar panels. The roof like structure could have electric conduits to the communities closest to it. The area between the highway 5 is already owned by the state and could produce massive quantities of solar power as it runs from the north end of "the Grapevine" up to the east of Tracy. This would have little impact on the environment. A simple cleaning and repair crew could start at one end and wash them occasionally or R&R anything needing attention.
