## **Comments in Support of Motion to Terminate (Part 5)**

Attached are the names of 6,982 Californians, who together submit the following comment in support of Sierra Club and other intervenor's motion to terminate this proceeding.

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Tomoko Murphy

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
David Cottle

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Susan Schell-Ryan

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Linda Fleming

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
James Land

I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Why are we even contemplating energy from a fossil fuel like coal? Kern County already has horribly poor air quality and this is no way to use the little water we have left in California. Do we have to wait until we turn on the faucet and NOTHING comes out to realize what a drought means?

Sincerely,  
Dorothy Clazie

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Gregory Booth

I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

The technology that could save California and the world is documented and right out in the open. I would like to see California lead the way in this. You can no longer ignore that all of your deeds are being recorded and i once again urge you to stop pursuing corrupt interests and listen to what the people are saying. We know that zero point energy systems are real. We know that water generating systems are real. the time has come to unshelve these technologies world wide. The time has come to build the universe in our image. By the grace of God.

Sincerely,  
John Sanford

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Jane Shevtsov

We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Carol Grey

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Mar 27, 2015

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

In this time of extreme drought, it is more than high time for the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more. Because of the effects this project will have on our water supply, our climate and levels of pollution, to continue this process is not only unconscionable, reprehensible and wasteful, it is stupid in the extreme.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law. That, barring interference from lawmakers beholdin' to the industry and their lobbyists, should be an end to it.

Therefore, I believe the time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore strongly urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Gunter Steffen

As a resident of Bakersfield, I know about the exceptionally poor air quality in the Kern County Basin. As the Commission should know, Bakersfield usually competes with the Ports of LA and Long Beach for Number 1 in air pollution (American Heart Association). I can hardly believe the Commission is even considering a coal fired power plant.

Kern County and Bakersfield are ideal for solar. Reject this coal plant.

Sincerely,  
Daniel Nadsady

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Rondi Saslow

Mar 27, 2015

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

Conscientious Californians are making choices on a daily basis: do I shower, do laundry, or water the garden?

Now the California Energy Commission has a choice to make. When it comes to using water for agriculture, there's no substitute. When it comes to energy, there are plenty of alternatives to dirty coal.

People need food and farmers need water to grow the food. The Hydrogen Energy California project would deprive farmers of more than 7,500 acre-feet of water per year -- right in the midst of the worst drought in California's history.

Additionally, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more. Without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project can't be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Joel Strauss

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Dear California Energy Commission ,

I recently moved to Ca. in the belief that this was a progressive state in terms of climate and human rights however in light of the considerations given to developments like the Hydrogen Energy California project like this I see that I may have been misguided. The world needs more clean renewable energy as well as wise water management. The Hydrogen Energy Project is neither of these. Please do not consider this project as it is bad for the people of this State and the planet.

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Adriann Debits

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Mark Swoiskin

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

My family also depends on well water, which nearly dried up last summer. We need to conserve water, not waste it. Southern California is ideal for the development of clean solar and wind energy. We do not need to pollute and waste our precious resource. Why is this project even being considered.

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Marjorie Shepherdson

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Tom Amick

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Patricia Anderson

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Timothy Dow

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Tami Phelps

California Energy Commission

Subject: Terminate the proceeding reviewing the Hydrogen Energy California project

Dear California Energy Commission ,

I'm writing to urge the California Energy Commission ("CEC") to terminate the proceeding reviewing the Hydrogen Energy California project. For more than a year, the developer has failed to respond to staff inquiries for more information about water use, greenhouse gas pollution and more.

California is in the midst of the worst drought in state history. We simply cannot afford to hand over 7,500 acre-feet of water every year when that water could provide critical supply to local farmers. Furthermore, without a clear and enforceable agreement to sequester the greenhouse gas pollution, the project cannot be built according to state law.

The time has come to close the book on this dirty and dangerous proposal. The developer either cannot resolve these critical issues and/or has ceased efforts to address them. I therefore urge the CEC to terminate the proceeding and prioritize other projects that can move the state in the direction of a truly clean energy future.

Sincerely,  
Karen Stewart
