Title 24 Section 6

When codes are update in a manner such as this, it's about pushing technology to meet goals. In this case, it's the State's efficiency goal. We need to reduce our energy consumption, improve our buildings usage, meet ZNE standards, and ultimately have more clean and efficient energy. It's not going to be cheap but technology will improve and come down it price as it has always done. The standards should not be forced out due to temporary cost constraints.
