## **15-MISC-02**

Public Input on the Implementation of the 2013 Building Energy Efficiency Standards: I support Version 16.x and Version 6.x of the proposed 2016 language and strongly urge you to make the changes immediately so the market can once again flourish. Every single customer we have been working with is frozen with no ability to move forward with any kind of an energy efficiency relamp of LED program with the current Title 24 Building Code. The compliance requires ROIs of over 8 years which is just not practical. Immediate relief must be given. LED retrofits are the most economical and ecologically sustainable solution and should be embraced not forbidden. Having spent significant time concentrating on the development of LED lighting product for the California market it is disappointing that the State that everyone expected to become the leader has fallen into a state of confusion and disarray. This must be repaired immediately before companies pull out of the game completely.
