## **Hydrogen Energy Facility**

Only in Kern County could this happen. Elk Hills is noted for oil. Most of my family used to work there and lived in lease houses. Oil is still produced there. My grandparents lived in Tupman many years ago. Tupman is not much, but I can't believe anyone would welcome the shipping of coal into the area to produce hydrogen energy.

There is no WAY that they can prevent harmful pollution to the western community--to the county as a whole.

Trucks produce mega amounts of air pollutants. Water is in short supply and should not be used for this purpose.

They want it there for dispersal of Carbon Dioxide!!?? Only people who have too much money invested in the real estate would propose this. If this is approved by County Supervisors, they should all lose their positions.
