## **Data Management for water**

I am an energy manager for a school district in the bay area. One of my initiatives is to work on water conservation. We are starting to upload data to portfolio manager to assist us with water management and meeting our drought goals. This takes a lot of staff time to do this manually and i would love to have the option of having a "green" button feature like we have with energy so it is automatically updated. This would help us to streamline this process and really make data informed decisions on the drought.
