Docket Number: 15-WATER-01

CLFP recommendations

The California League of Food Processors (CLFP) recommends that, to make the WET program attractive to a wide range of food processing companies, that the program requirements provide sufficient flexibility in terms of the types of projects that can be funded, payment terms, and how the benefits will be evaluated. Some projects may result in significant water savings, but only modest reductions in energy and GHG emissions. CLFP suggests that the focus should be on the entire project, and not have minimum thresholds for water or energy savings.
