I have seen the new statement that the Palen permit is asking permitting for a trough system and that comments about the effects of biological impacts were only directed to the tower that they are no longer proposing.

To make it absolutely clear, my comments are for both any towers, and also the trough system. This is the negative effect of the trough system:

Ecological and Cultural Issues – The Usage of Massive Arrays of Mirrors is noted to heavily impact the Desert Wildlife endangering the endangered species. California has already seen a massive fight on this issue with Project Developers curtailing the size of their Plants and spending money to move the wildlife.

Wildlife cannot be moved from this desert area, this is a migration path and the fiery deaths of birds by these mirrors is unacceptable, not to mention the insects and bats that are also destroyed.

Will you please concentrate on safer methods of solar power, there are many you know!

Thanks,
Marian Fricano
