## **Our 500 MW LEAPS project can be operating in 2020-2021 timeframe**

I am the lead developer for the 500 MW Lake Elsinore Advanced Pumped Storage Project. We are intending to be ready to construct the project in one year. Although we have been working on the project for quite some time, it is clear that the only remaining barrier is determining mechanisms to provide a regulated revenue stream, whether through the PUC, the CAISO and FERC or through direct arrangements with area utilities.

We would be pleased to be a panel participant.

We will be providing presentation material over the next few days.
