## **Noise, Vibration and Dust during construction and beyond.**

I represent Mutual 8 of the Leisure World Mutual, representing around 400 residential units of about 600 elderly persons who live next to the site of this energy plant.

We wish to register our great concern of the dust, noise and vibration management for this project and upgrade of the facilities, especially during the demolition of the old facilities.

When the DWP plant next door to the AES facility was upgraded, there was considerable dust raised into the environment and the noise lasted for two years. We would not like to see this happen again.

We would like to see a plan to mitigate these results of the environmental impact on our community during the upgrade and demolition process. The continued positive health of our senior residents, many of whom already suffer from respiratory health issues, is at stake.

Thank You,

Sincerely,

Daniel M Curtin, SPHR, MBA
