The staff final report, *California Energy Demand 2016-2026, Revised Electricity Forecast (CED)* is prepared in support of the *2015 Integrated Energy Policy Report*. The staff report presents forecasts of electricity and end-user natural gas consumption, peak electricity demand for California and for utility planning areas within the state, and scenarios for additional achievable energy efficiency.

This staff final report will be presented for possible adoption by the California Energy Commission during the Business Meeting held Wednesday, January 27, 2016. The forecast, if adopted, will be used in a number of upcoming planning proceedings, including the California Independent System Operator's (California ISO) transmission planning and the California Public Utilities Commission's (CPUC) long-term procurement planning.
