Docket Number: 16-DIVERSITY-01

We can do better

With the alarm being sounded on both climate change and rising seas, we can do more, sooner!

What I am referring to is, with one project, we can give California citizens both cheaper electric bills and water bills, while removing sea water from rising seas.

If we do, the benefits to every citizen of California is given relief.

What I propose is, getting a small grant of about \$500,000.00 to build 1 small plant making about 1,000,000 gallons of fresh water monthly. While we do this, the plant will begin to make about 750 kilo watts per hour, of green renewable electric energy. This energy will be made at a dollar value of about 5 to 1 compared to wind or solar energy.

It is made 24 hours a day, 7 days a week, 365 days a year. The net result would make this first plant out do several large 340 meter wind generators for energy over a years time.

It would help California conserve much of her land. These giant wind generators cannot give you the energy you need, to help care for your low income and poor families, like this can.

We can sell our energy for less than half of what wind energy or solar does. It gives us an ability to do this, because we also can sell water extremely cheap.

We have two products from one project, which helps us provide it so cheaply.

It should not be hard to make clean electric energy. We can do better for your people, why am I being squeezed out? I get offers, that come after, I am disposed to reply, why?

If I am to be able to compete, shouldn't I get timely offers, with a chance to give a timely reply? If California, or for that matter the USA and the world, be allowed to see energy which can be made so cheap?

This same plant, can be retrofit, to make about 150 mega watts of clean, green, renewable cheap electric energy, per hour.

As a result, California could see about 10,000,000 gallons of fresh water monthly. These plants can equal a small nuclear power plant for energy, but without any of the hazardous waste. A huge plus, considering, this waste is as deadly as anything, to human life.

Washington States waste site, has been found lacking, since its bladders have leaked. Where will Cal. Burry its waste in the future?

Why do we waste time, to find if energy like this would be good. If, we are to set up a system of better, cleaner, cheaper, energy makers, we need to start soon. The sooner the better, if you are to believe those warning of global climate change!

I need a little help, but none of you actually care, if we are to clean up this mess man has made. It is in all, of our best interests, to do as much as possible, as soon as possible. While doing that, why not make it help our people, instead of making it harder on everyone?

Why make our poor and low income, see drastically raised electric and water bills, when we have it within our power, to help them see, cheaper rates. If we make electric energy so cheap, some will use it to heat with!

This lowers demand for oil, reducing our dependence on it. We could be energy independent in just a few years.

That helps us, not have a need to stay in the mid east, with all of its heart felt problems.

People need cheap clean energy and water, will you stand in the way, or help them, to see it sooner than later. Later may be too late,

Thank you, for your time, but this is a time sensitive message!

William Ehlert
