RE: AQ-SC3, AQ-SC4, AQ-SC5, and WORKER SAFETY-8 Monitoring and Mitigation
Activities at Mojave Solar Project (09-AFC-5C) for October 1 through October 31, 2015

Dear Mr. Rundquist:

This letter is to update you on the air quality construction monitoring occurring at the Mojave Solar Project (MSP) site during December 2015. Compliance with the WORKER SAFETY-8 condition was also monitored. No construction activities occurred December 1 through 31, 2015. Compliance monitoring was performed by me as the full-time onsite Air Quality Construction Mitigation Manager (AQCMM).

Overview

No Construction activities occurred in December. No new diesel equipment was brought onsite during December 2015. All equipment onsite prior to December 2015 were removed during the month. A summary of the compliance with the Air Quality Construction Mitigation Plan (AQCMP) is provided in the following sections. Daily, weekly, and monthly observation logs and other site inspection forms are maintained onsite and available upon request.

Compliance Assessment

AQ-SC3 – Fugitive Dust Control

All of the AQ-SC3 COCs were in effect during December 2015. The following section summarizes each COC and describes the level of compliance.

- **AQ-SC3a: Soil stabilizers on main access roads and delivery areas**

Soil stabilizers have been applied to finished access roads and delivery areas. Main roads in Beta have been paved. No new activity.

- **AQ-SC3b: Watering of disturbed areas**

No Construction activities occurred in December.

- **AQ-SC3c: Speed limits**

The required speed limits have been enforced onsite.

- **AQ-SC3d: Speed limit signage**

Speed limit signage has been posted and is clearly visible at all site entrances and Solar Field.

- **AQ-SC3e: Tire inspection and washing prior to exiting to paved roadway**

Although tire washing stations have not been installed, all operation vehicles are inspected for dirt and other debris prior to exiting to paved public roadways. No Construction activities occurred in December.

- **AQ-SC3f: Tire washing station**

As stated previously, no tire washing stations have been installed. However, tires of operation vehicles are inspected for dirt and other debris prior to exiting to paved public roadways. No Construction activities occurred in December.

- **AQ-SC3g: Unpaved exit treatment**

Rumble plates are installed at all site exits. Also permanent gravel ramps were implemented at all the egress point to the inside paved road in Alpha. Similar ramps were installed at Beta. No Construction activities occurred in December.

- **AQ-SC3h: Construction vehicles use approved entrances only**

When traveling between sites, construction vehicles use approved entrances only. However no Construction activities occurred in December.

- **AQ-SC3i: Run-off onto public roadways**

Earthmoving activities have resulted in run-off being directed away from paved public roadways. In addition, fiber rolls have been placed where the potential for run-off onto public roadways exist. Watering has not resulted in run-off onto public roadways. DMP's still installed, however no Construction activities occurred in December.

- **AQ-SC3j: Sweeping of paved roads within construction site**

Sweeping of paved roads within the site is performed as necessary.

- **AQ-SC3k: Sweeping of public paved roadways with access to the MSP site**

Sweeping of Harper Lake Road and Lockhart Road is performed as necessary..

- **AQ-SC3l: Stabilization of storage piles**

No earthmoving activities were performed during December 2015. Storage piles generated as a result of earthmoving activities will be redistributed. All other soil piles are temporary excavation spoils or grading excesses that are re-distributed prior to exceeding the 10-day limit for cover or treatment.

- **AQ-SC3m: Stabilization of transported solid bulk material**

None outside the site.

- **AQ-SC3n: Wind control techniques**

Wind fencing has been installed in Alpha East, Alpha West, and Beta along the eastern and western borders of each area.

Soil stabilization has been implemented on finished haul roads and delivery areas. In addition, main roads in Alpha, Beta and Harper Lake Road south of Lockhart Road have been paved. Rumble plates are installed at all site entrances/exits, and the tires of operation vehicles are inspected for dirt and other debris and swept clean as needed prior to exiting the site onto paved roadways.

- **AQ-SC5 – Diesel-Fueled Engine Control**

No new equipment was brought to the site, no Construction activities occurred in December. Previous construction equipment were removed during the month.

- **AQ-SC5a: Equipment Tags**

A visible air quality tag with a unique number (AQ #) was issued and adhered to all construction equipment onsite. However no Construction activities occurred in December.

- **AQ-SC5b: USEPA Engine Tier Requirement**

No new construction equipment arrived onsite during December 2015.

- **AQ-SC5c: Retrofit Control Termination**

No equipment with retrofit control technology was brought onsite.

- **AQ-SC5d: Maintenance Records**

Maintenance records for all vehicles are available upon request.

- **AQ-SC5e: "All diesel heavy construction equipment shall not idle for more than five minutes."**

Idle time was monitored by the activity managers and AQCMM. This condition was met during this reporting period.

This MCR is also being provided to California Department of Fish and Wildlife (CDFW) and USFWS.

1.1 Status of Biological Staff

Attachment 1 provides a summary table of the biological staff submitted for approval on this project and the status of their agency approvals.

2 Ongoing Construction Monitoring

This section summarizes biological monitoring activities conducted by Ironwood Consulting Inc. throughout December 2015.

Please refer to sections below for specific information about wildlife and plants found by biological monitors in December.

Implementation of avian monitoring at the evaporation ponds continued during December and is discussed briefly in the “Evaporation Pond Monitoring” section. BIO-19 monitoring reports are not included in this MCR and will be submitted under separate cover.

MSP requires that all construction and operations staff receive WEAP training and a brochure within one week of arrival on the project site and annually for permanent employees. A total of 61 workers went through WEAP training in December 2015. On November 17th, 2015 CEC approved the revised WEAP for Operations. This month’s WEAP training included an annual refresher for onsite personnel that have previously taken the WEAP training. No construction related activities were conducted during December. Work on site consisted of Operations and Maintenance activities.

Attachment 2 provides an ongoing summary table of the project’s WEAP attendance and the hard copy sign-in training logs for December 2015.

On a typical construction day, the Biological Monitor or Designated Biologist:

- Monitors Harper Lake Road at before high traffic in the morning and the evening, or as appropriate (November through February). Biological staff monitored the road on a more frequent basis when temperatures were optimal for tortoise movement
- Monitors active construction areas, parking lots, laydown yards, and any areas of potential threat to vegetation, soils, or wildlife
- Monitors the evaporation ponds several times a day
- Inspects desert tortoise exclusion fences and tortoise guards, as required
- Inspects potential entrapment areas (e.g., trenches, vaults, basins, buildings)
- Monitors for formation of potential standing water
- Inspects kit fox exclusion buffers and downloads photos from motion-sensor cameras at shelter sites
- Conducts raven bi-weekly point-counts, and breeding season nest search surveys
- Conducts point counts at evaporation ponds and adjacent wetlands
- Investigates reports of hazardous waste spills
- Inspects pipes greater than 3 inches in diameter that are less than 8 inches above the ground surface
- Performs other special biological-resources-related activities, as required

2.1 Construction Activities

On December 23, 2014, Abeinsa (AEPC) turned the site over to Abengoa to manage facility operations. AEPC left the site on December 2nd, since that time only Operations and Maintenance activities have occurred onsite. The Temporary Certificate of Occupancy was

scheduled to expire on November 30, 2015. On November 25th, the CBO extended the Temporary Certificate of Occupancy until February 29th, 2016.

In December, no construction activities occurred onsite. Operations and Maintenance activities occurred in all project sectors, with the highest concentration in the Alpha and Beta power block areas. Power block activities included insulating, consolidation of inventory, permanent lighting, and other punch list items, as necessary. MSP continued to discharge water into the Alpha West and Beta West evaporation ponds in December.

Maintenance of desert tortoise guards, exclusion fences, and weed control rumble strips occurred on an as-needed basis.

2.1.1 Desert Tortoise Exclusion Fence Repairs

Biological staff conducted comprehensive monthly desert tortoise exclusion fence inspections as required by BIO-11 and the Biological Opinion. It is recommended that operations management have a regular maintenance plan in place to remove soil from guards and maintain fences to agency specifications.

2.2 Rain Events

In December, there were no significant rain events at MSP.

2.3 Hazardous Material Spills

Eight hazardous material spills (oil, hydraulic oil, Therminol VP1, and diesel) were reported to biological staff in December. Abengoa provided weekly spill reports to the biological staff. All spills were checked by biological staff who confirmed that the cleanup was sufficient to remove or reduce risk to wildlife.

2.4 Non-compliance Notifications and Reports

Biological staff issued no non-compliance reports (NCR) in December. NCR-9 regarding standing water is pending formal acceptance by the CEC for the implementation of an MSP-proposed resolution.

Photo 1: Standing water at Beta #12, photo taken 12/21/15

2.4.1 NCR-9: Standing Water

On December 1, 2014, NCR-9 was issued for continued standing water located primarily within Alpha and Beta power blocks. The Designated Biologists will continue to provide weekly reports to the CEC as requested by Andrea Martine on May 26, 2015. On August 13 via email, CPM provided the following response to Abengoa's request to close NCR-9, "Until staff receives reports of no standing water on Abengoa Mojave Solar site, NCR-9 cannot be closed."

There were only a few facility sources that contributed to standing water this month. Abengoa is actively trying to resolve all remaining sources with work orders or applying sufficient gravel to decrease wildlife access to standing water. Beta #12 has been an ongoing issue due to ongoing maintenance issues. Steps are being taken to add gravel to this area and to finalize maintenance issues.

2.5 Desert Tortoise

December is considered the less-active desert tortoise season. No sightings of desert tortoises occurred in the project vicinity in December. No construction activities required desert tortoise clearance surveys and no tortoises were observed within the boundaries of MSP in December.

2.6 Invasive Weeds

There are two definitions of weed species provided by the BIO-16 Tamarisk Plan, and the Staff Assessment and Commission Decision. The first definition is provided in the BIO-16 condition, which states an invasive species is one that is included in the California Invasive Plant Council's (Cal-IPC) "high" or "moderate" dispersal or establishment rating. Cal-IPC's definitions have changed since 2006, so CEC Staff Biologist Ann Crisp's guidance is that a species must have an overall ranking of either "high" or "moderate" to meet this definition. According to condition BIO-16, these species, and others with an overall Cal-IPC ranking of high or moderate must be eradicated from the site for at least three years for the condition to be deemed successful.

In December, no tamarisk (*Tamarix ramosissima*) were observed at MSP. The other species that meet this definition are mostly spring annuals that die back in the summer. Reduced observations do not indicate absence; annual plants in an arid environment may only be vegetatively present for 1 to 2 months and seeds can persist in soil for years until conditions are optimal for growth.

The second definition is of "exotic" plant species. According to the BIO-16 Tamarisk Plan, and guidance provided by CEC staff biologist Ann Crisp via email on May 28, 2014, species included on the Cal-IPC list but that do not have an overall rating of moderate or high are considered "exotic." Exotic species must have less than 5 percent cover of MSP for BIO-16 to meet its success criteria goals. Reduction of the number of exotic plant species observed since July does not indicate absence as described above. Five species that meet this definition were observed at MSP in December:

- Barbwire Russian thistle (*Salsola paulsenii*)
- Russian thistle (*Salsola tragus*)
- Mediterranean grass (*Schismus arabicus*)
- London Rocket (*Sysimbrium irio*)
- Heron's bill (*Erodium cicutarium*)

In accordance with BIO-16, biological staff continued mapping invasive and exotic plant species. These maps will be submitted at the conclusion of the construction activity to report the locations of any invasive plants onsite.

An extensive eradication effort occurred on MSP in December. Enyon Weed Control was on site in December and sprayed for weeds on the entire solar site. The effort took approximately two weeks.

Photos 2: Equipment used to spray for weeds

Photo 3: Worker spraying for weeds

2.7 Kit Fox and Other Mammals

Kit fox whelping or pupping season is between February 1 and September 30.

DKF Site #9, located in a relatively unused area in the southeast corner of Alpha East (Figure 2). Very little activity was observed this period. Biological staff inspected the integrity of the exclusion buffer and downloaded the photos from the motion-sensor camera regardless of the amount of activity. Due to the limited personnel activity expected at the DKF #9 location during operations of the facility, at the recommendation of the DBs, Abengoa has temporarily agreed to maintain this site in hopes that foxes will continue to use this location and not establish a shelter site in an undesirable location.

While checking the existing camera, DKF activity was noticed at a pipe approximately 40 yards to the west. On December 7th, an additional camera was set up on this pipe to document any activity. Cameras documented DKF's checking out the pipe, however, there was no sign of any DKF using either location.

In December, there was the usual coyote (*Canis latrans*) observations. Biological monitors directly observed the coyotes as well as received many reports of coyotes in the power blocks. Designated Biologists reminded Abengoa staff not to feed wildlife. Informational posters were placed in the break rooms of both Alpha and Beta. Security staff was informed that if they saw people feeding the coyotes to notify the Compliance staff.

2.8 Migratory Bird Treaty Act Protected Species

Two new avian species were identified by Avian Biologists in December, these were added to the list (Attachment 3). Shorebird families observed included: stilt and sandpiper species. Water

birds that were observed included: duck, gull, and grebes. Nesting activity by MTBA birds concluded in August, so no nesting activity was observed this month.

2.9 Raven Monitoring, Management, and Control

Common Raven monitoring activities continued on the MSP site per BIO-18 and as outlined in the Common Raven Monitoring, Management and Control Plan. The December Monthly Common Raven Monitoring Results report provides information on monitoring activities, survey methods, maps, point count survey results, and datasheets (Attachment 4).

2.10 Wildlife Injuries and Mortalities

2.10.1 Migratory Bird Treaty Act Protected Species

Biological staff found three carcasses in December that were MBTA-protected species: a Killdeer (*Charadrius vociferous*), one Mallard (*Anas platyrhynchos*) and one Eared Grebe (*Podiceps nigricollis*) (Figure 2). All encounters were documented in BIO-6 Wildlife Observation Forms and were submitted to the CEC under separate cover. All carcasses were placed in MSP's onsite freezer for collection by the USFWS's Office of Law Enforcement and reported in accordance with MSP's interim Special-Purpose Utility Permit-Solar (SPUT). The USFWS-issued interim SPUT expires on January 15, 2016. An extension was requested on December 9th, 2015. The USFWS extended MSP SPUT permit on January 8th, 2016, the interim SPUT now expires on June 16, 2016.

On December 1st, a Killdeer was found dead at the Beta West evaporation pond (Photos 6 and 7). No obvious signs of trauma related to cause of death were observed.

Photos 4 and 5: Overview and close-up of Killdeer found on December 1

On December 6th, a biological monitor located the remains of a Mallard. The remains were found at the Beta West evaporation pond (Photos 8 and 9). No obvious signs of trauma related to cause of death were observed.

Photos 6 and 7: Overview and close-up of Mallard on December 6

On December 16th, a biological monitor located an Eared Grebe in the Beta east evaporation pond (Photos 10 and 11). No obvious signs of trauma related to cause of death were observed.

Photos 8 and 9: Overview and close-up of Eared Grebe remains on December 16

2.10.2 Special-status Species

At the time of this MCR, CDFW did not have the necropsy results for the three kit foxes killed on June 28, August 18, or December 11, 2014. CDFW and its necropsy lab are actively processing backlogged tissues. When received, results will be reported in the MCR.

2.10.3 Other Species Mortalities

There were no other species mortalities discovered on the site for December.

2.11 Observed Species

A list of wildlife species observed in December is included in Attachment 3. Five special-status bird species were observed at MSP:

- Bell's Sparrow (*Artemisiospiza belli*), CDFW Watch List
- California Gull (*Larus californicus*), CDFW Watch List

-
- Loggerhead Shrike (*Lanius ludovicianus*), CDFW Species of Concern, USFWS BCC
 - Northern Harrier (*Circus cyaneus*), CDFW Species of Concern
 - Peregrine Falcon (*Falco peregrinus*), CDFW Fully Protected, USFWS BCC

Several of the birds on the observed species list are considered “special status” due to restricted nesting regions or scenarios, but they are unlikely to nest at MSP. However, biological staff will continue to report observations of these birds as “special status” due to their inclusion in CDFW’s California Natural Diversity Database Special Animal List (March 2015 version).

2.11.1 Invasive Wildlife Species

Three California invasive wildlife species observed at MSP in December were: European Starling (*Sturnus vulgaris*), House Sparrow (*Passer domesticus*), and house mice.

Avian biologists did not observe any invasive bird species’ nesting activity in December.

MSP has contracted with Terminix to provide monthly pest and rodent control service to the facility. As noted previously, MSP staff reported that glue traps caught several house mice in December.

3 Operations Monitoring

3.1 Evaporation Pond Monitoring

During the transition between construction and operation phases of the project, CPM, Dale Rundquist, gave conditional approval for MSP to discharge water into the evaporation ponds without an approved Evaporation Pond Management and Monitoring Plan (Evaporation Pond Plan) in place. Conditions of this initial approval were that biological staff must implement draft monitoring protocols provided to CEC on July 21, 2014, which include biweekly avian point counts at the evaporation ponds. CEC provided additional guidance to install and deploy deterrents on November 12, 2014 after two birds were found dead within the evaporation ponds. During this period, the CEC also required daily monitoring of the Alpha and Beta evaporation ponds. On December 19, 2014, the CEC Staff Biologist Ann Crisp told the Designated Biologist via a phone call that the evaporation pond monitoring reports should not be incorporated into the MCR but should be submitted under separate cover. Consequently, they are not included in this report but are being submitted separately.

With bird fatalities discovered on December 1st and 6th at the evaporation ponds, this triggers adaptive management pursuant to BIO-19 of the Commission Decision which states:

“Triggers for adaptive management (i.e., modifications to existing technology or replacement with new technology). Adaptive management shall be necessary if: 1) more than one dead bird per quarter is discovered at the evaporation ponds...”

On November 18th, MSP submitted for approval to the CEC to implement the electronic bird control technology by BirdGard. There was no decision from the CEC regarding proposed implementation of this technology at the time the report was written. More information on this deterrent is in the BIO-19-12-00 Monthly Evaporation Pond Monitoring Report.

On June 26, 2015, MSP submitted Revision 4.3 of the Evaporation Pond Plan to the CEC. A meeting between CEC staff and the MSP occurred on December 16, 2015, to discuss outstanding issues on the Evaporation Pond Plan. A revised plan will be submitted to the CEC based upon this discussion.

1.0 Introduction

The Abengoa Mojave Solar Project (MSP) is required to provide a monthly report on Common Ravens (*Corvus corax*) to the California Energy Commission (CEC), United States Fish and Wildlife Service (USFWS), and California Department of Fish and Wildlife (CDFW). The CEC Final Decision includes Condition of Certification BIO-18 stating that the project owner shall implement control measures to manage its construction site and related facilities in a manner to control raven populations, and to mitigate cumulative and indirect impacts to desert tortoise associated with regional increase in raven numbers. In accordance with BIO-18, the CEC approved the Common Raven Monitoring, Management, and Control Plan (Raven Plan) on March 26, 2012. Refer to BIO-18 and the Raven Plan for a description of monitoring and survey protocol.

2.0 Construction Monitoring Activities

The following section summarizes biological monitoring activities conducted by Ironwood throughout December 2015.

On a typical weekday, one biological monitor or designated biologist:

- Monitors Harper Dry Lake Road before high traffic in the morning and the evening, or as appropriate (November through February). Biological staff monitored the road on a more frequent basis when temperatures were optimal for tortoise movement
- Monitors active construction areas, parking lots, laydown yards, and any areas of potential threat to vegetation, soils, or wildlife
- Monitors the evaporation ponds several times a day
- Inspects desert tortoise exclusion fences and tortoise guards, as required
- Inspects potential entrapment areas (e.g., trenches, vaults, basins, buildings)
- Monitors for formation of potential standing water
- Inspects kit fox exclusion buffers and downloads photos from motion-sensor cameras at shelter sites
- Conducts raven bi-weekly point-count surveys
- Conducts point counts at evaporation ponds and adjacent wetlands
- Investigates reports of hazardous waste spills
- Inspects pipes greater than 3 inches in diameter that are less than 8 inches above the ground surface
- Performs other special biological-resources-related activities, as required

3.0 Methods

The designated biologist ensures that the biological monitors are trained to implement the Raven Plan in both raven monitoring and management measures. Biological staff also conduct 10-minute stationary point count surveys at seven locations around the site (Supplement 1). The

purpose of the point counts is to record raven observations including date, time, location, number of individuals, age, behavior, distance from the station location, and any other pertinent notes (e.g., nesting behavior). This information is recorded on a hard copy datasheet. Point count surveys are conducted with a minimum of one week in between.

Point count surveys were positioned to monitor project-specific activities and features that have potential to attract or subsidize ravens. The Raven Plan defines six “conditions of concern” as:

1. Availability of water from evaporation ponds
2. Potential creation of new perching/roosting/nesting sites for ravens
3. Temporary water ponding potential from dust suppression associated with construction, operation, and maintenance
4. Common Raven food sources from soil disturbance (rodents, insects, etc.) and road kill associated with construction activity
5. Human food and waste management
6. Landscaping that could provide foraging, perching, and available water opportunities

Biological Monitors did not record incidental observations of Common Ravens. Incidental sightings, regardless of avian species, cannot be analyzed in any way that is statistically valid.

If a problem area is identified during daily monitoring efforts, the point count surveys will be increased to a weekly basis until the issue is resolved. Habitual perching sites will be identified and actions taken to discourage use. If hazing techniques are employed to discourage raven use, biologists will record information on date, time, location, habitat, number of individuals, and response to hazing. Potential or active raven nests will be documented and removed according to Raven Plan specifications. Biological staff will report on whether control measures are working and provide further recommendations in the biological monthly compliance report.

4.0 Results

Point Count Surveys

In December, two biweekly point count surveys were conducted in accordance with the Raven Plan protocol. They were conducted on December 13 by Brian Sandstrom (BS) and December 30 by John Yerger (JY). On December 13, fourteen ravens were observed: five at Station 2, two at Station 5, three at Station 6 and four at Station 7 (Supplement 1). On December 30, eighteen ravens were observed: two at Station 2, two at Station 5, two at Station 6, and twelve at Station 7. Point count observations did not document any nesting behavior or problem areas. The Common Raven Fixed Point Observation Data Sheets are provided in Supplement 3. Table 2 provides a summary of point count observations.

Nest Monitoring

According to the Raven Plan, biweekly breeding season raven nest surveys are required March through June. Biological staff did not identify any new raven nests in December.

Dear Mr. Rundquist:

CH2M HILL is assisting Mojave Solar LLC in complying with California Energy Commission (CEC) Conditions of Certification, specifically, CUL-1 and CUL-6, for cultural resource monitoring, as set forth in the Commission Decision for the Mojave Solar Project (MSP). This report covers the cultural resources monitoring conducted during the reporting period of December 1, 2015 through December 31, 2015, by CH2M HILL.

Personnel Active in Cultural Monitoring This Period

The monitoring program was directed by Cultural Resource Specialist (CRS) John Dietler. No monitors were active during this period.

Monitoring and Associated Activities This Period

None. Cultural and Native American monitors were on an on-call schedule, but no ground-disturbing activities subject to cultural resource monitoring took place during this reporting period.

Cultural Resources Discoveries This Period

No cultural resources over 50 years of age were observed.

Anticipated Changes in the Next Period

Very little construction-related ground disturbing work remains to be done. No construction related ground disturbance will take place on days when monitors are not

present. The next planned construction related ground disturbance is associated with the Beta power block gate, which has not yet been scheduled.

Mojave Solar Project (MSP) for the period of December 2015

Dear Mr. Rundquist:

This letter is to confirm SWCA Environmental Consultants paleontological monitoring and mitigation activities at the MSP site during the period of December 1 through December 31, 2015. As of February 28, 2014, major ground-disturbing activities for the MSP had been completed and SWCA's monitoring services were no longer required onsite. No paleontological monitoring occurred during the above-referenced period.

It has been a pleasure working with you on this project. If you have any questions please do not hesitate to contact me at 626 240 0587 ext 6605 or at ccorsetti@swca.com.

Dear Mr. Rundquist,

As required by the California Energy Commission and more specifically by Condition of Certification COMPLIANCE5, attached please find an update to the following Compliances:

COMPLIANCE-2 [ASI + A/T]

The project owner shall maintain project files on-site or at an alternative site approved by the CPM for the life of the project, unless a lesser period of time is specified by the Conditions of Certification. The files shall contain copies of all "as-built" drawings, documents submitted as verification for Conditions, and other project-related documents. Energy Commission staff and delegate agencies shall, upon request to the project owner, be given unrestricted access to the files maintained pursuant to this Condition.

Hardcopy files of all "as-built" drawings and documents are available for review at the Abeinsa EPC Alpha west main site trailer.

COMPLIANCE-5 [ASI + A/T]

A compliance matrix shall be submitted by the project owner to the CPM along with each monthly and annual compliance report. The compliance matrix is intended to provide the CPM with the current status of all Conditions of Certification in a spreadsheet format. The compliance matrix must identify:

1. The technical area;

2. The Condition number;
 3. A brief description of the verification action or submittal required by the Condition;
 4. The date the submittal is required (e.g., 60 days prior to construction, after final inspection, etc.);
 5. The expected or actual submittal date;
 6. The date a submittal or action was approved by the Chief Building Official (CBO), CPM, or delegate agency, if applicable; and
 7. The compliance status of each Condition, e.g., "not started," "in progress" or "completed" (include the date).
 8. If the Condition was amended, the date of the amendment.
- Satisfied Conditions shall be placed at the end of the matrix.

The Compliance Matrix has been included, please see attachment.

COMPLIANCE-6 [ASI + A/T]

The first Monthly Compliance Report is due one month following the Energy Commission business meeting date upon which the project was approved, unless otherwise agreed to by the CPM. The first Monthly Compliance Report shall include the AFC number and an initial list of dates for each of the events identified on the Key Events List found at the end of this section of the Decision.

The Key Events list has been included with current completed activity dates listed, please see attachment. This letter satisfies this compliance as well.

COMPLIANCE-10 [ASI + A/T]

In addition to the monthly and annual compliance reporting requirements described above, the project owner shall report and provide copies to the CPM of all complaint forms, including noise and lighting complaints, notices of violation, notices of fines, official warnings, and citations, within 10 days of receipt.

Complaints shall be logged and numbered. Noise complaints shall be recorded on the form provided in the **NOISE** Conditions of Certification. All other complaints shall be recorded on the complaint form located at the end of this section.

On 02/25/2015 Mr. David Leinbeck, owner of the residence at 15635 Lockhart Road, filed a complaint in person at the Alpha West trailer. He reported that he was experiencing glare from the mirror field on the east side of his house. Mojave Solar permitting department met with him and informed him that they would investigate the matter and inform him of any corrective action. The complaint was submitted to the CPM on 02/27/2015. AEPC/ASI staff visited the resident on 05/03/2015. Resident rejected an option of placing a screen fence on his property to minimize glare. Resident suggested monetary compensation to resolve the issue. ASI submitted a registered letter to the resident stating it could either construct a fence on their property or on ASI property to address the glare issues he has issue with. To date, resident has not responded, CPM was provided with a copy of the certified letter.

Provide an analysis on the effectiveness of the drainage, erosion, and sediment control measures and the results of monitoring and maintenance activities.

Please see the attached Construction Site Stormwater Runoff Control Inspection forms. The contractor reports as of November 2015 that no new straw rolls (24,730 lf total for project) and no new swale (16,219 lf total for project) have been installed for this month. The existing fiber rolls and swales continued being monitored, maintained, and replaced as needed. These BMP's were effective in preventing sediment run off from the site. There are two concrete washout stations (1 in Alpha and 1 in Beta). Additionally, the steel rumble strips remain in place at the Alpha west entrance, Alpha east entrance and the Beta entrance. They were effective in preventing dirt and mud from being tracked from the site onto Harper Lake Road and Lockhart Road as well as an effective deterrent against the spreading of noxious weeds. The steel beams are continuously maintained to prevent clogging. Street sweeping of the main entrances and Harper Lake Road and Lockhart Road is occurring on an as needed basis as a means of good housekeeping; it has improved and will continue to be the main activity to keep the streets free of dirt and mud, especially when high winds and storm events occur. Soil stabilizer wasn't used for this month on traffic areas as daily watering was an effective means for dust control. Project site areas for the month that have been stabilized are 0 acres for Alpha East (279.50 acres total), 0 acres in Alpha West (369 acres total), 0 acres in Beta East (502 acres total), and 0 acres in Beta West (102.50 acres total). No sand build-up was reported in the retention basins between collectors. Trash collection has vastly improved, a crew was assigned to the task and it is being taken care of daily. Individual receptacles have been checked daily and are emptied as needed. Notification to the subcontractors to clean up their own trash and food waste, especially any accumulating in the trenches, pipes and power block areas has been mentioned at the daily subcontractor meetings. All site personnel have been instructed to not feed any on site wildlife, particularly coyotes, who have come onto the site looking for food. Evidence of wildlife scavenging has diminished to the point of being a non-issue. However, the DB still should be contacted immediately should a coyote or any other wildlife be spotted. Sand removal along tortoise fences was done daily. Please see attachments, which include the SWPPP Summary and weekly Construction Site Stormwater Runoff Control Inspection forms signed by the project QSP and the Bureau Veritas site inspector.

SOIL&WATER-2

The project owner shall comply with the Waste Discharge Requirements (WDRs) established in Soil and Water Resources Appendices C, D, and E for the construction and operation of the surface impoundments (evaporation ponds), land treatment units, and storm water management system. These requirements relate to discharges, or potential discharges, of waste that could affect the quality of waters of the state, and were developed in consultation with staff of the State Water Resources Control Board and/or the applicable California Regional Water Quality Control Board (hereafter "Water Boards"). It is the Commission's intent that these requirements be enforceable by both the Commission and the Water Boards. In furtherance of that objective, the Commission hereby delegates the enforcement of these requirements, and associated monitoring, inspection and annual fee collection authority, to the Water Boards. Accordingly, the Commission and the Water

Board shall confer with each other and coordinate, as needed, in the enforcement of the requirements. The project owner shall pay the annual waste discharge permit fee associated with this facility to the Water Boards. In addition, the Water Boards may "prescribe" these requirements as waste discharge requirements pursuant to Water Code Section 13263 solely for the purposes of enforcement, monitoring, inspection, and the assessment of annual fees, consistent with Public Resources Code Section 25531, subdivision (c). No later than sixty (60) days prior to any wastewater or storm water discharge or use of land treatment units, the AMS project shall provide documentation to the CPM, with copies to the Lahontan RWQCB, demonstrating compliance with the WDRs established in Appendices C, D, and E. Any changes to the design, construction, or operation of the ponds, treatment units, or storm water system shall be requested in writing to the CPM, with copies to the Lahontan RWQCB, and approved by the CPM, in consultation with the Lahontan RWQCB, prior to initiation of any changes. The AMS project shall provide to the CPM, with copies to the Lahontan RWQCB, all monitoring reports required by the WDRs, and fully explain any violations, exceedances, enforcement actions, or corrective actions related to construction or operation of the ponds, treatment units, or storm water system. SWAT2-01-00, construction plans for the Evaporation ponds and LTU's were submitted to the CEC, Lahontan and CBO on June 6, 2013 and approved by all agencies on June 11, 2013. SWAT2-02-00, a modification to the LTU plans was submitted to the CEC and Lahontan on August 5, 2013, and an approval was issued on August 8, 2013. SWAT2-04-00 for a change in verification was requested by the CEC but AEPC suggested that any change will be covered by the closure compliances, COMPLIANCE-12, -13 and -14. The CEC responded on September 12, 2013 that they were in agreement. SWAT2-03-00, for the monitoring well system was submitted to the CEC and Lahontan the week of 10/28. ensure that their habitats won't be disrupted with the use of explosives for the stuck pump wells. As of 10.13.2012, the well contractor was able to remove the pump from Well #11 by conventional means. However, Well #2 has now been determined as having a stuck pump and needing explosives to remove. The abandonment package was revised and resubmitted to the CEC on 10.22.2012. CEC has approved the use of explosives on Wells #2 and #14 as of October 31, 2012. As of March 5, 2013, the remaining wells to be abandoned are: Ryken and Wetlands. Wells #2 and #14 (by explosives) and 8, 10, 19, were abandoned during January 2013 but their well completion reports were finalized this month, please see attachments. Ryken and Wetlands wells were approved to be abandoned by SBC on May 7, 2013. Final abandonment was completed on May 17, 2013 and well completion reports were submitted to the CEC for approval. ASI and Abeinsa EPC have agreed on a new location of the Beta #4. An exhibit indicating final production well locations (including Beta #4) was provided to CPM on 11/27/2013. CPM responded asking for the well design by well contractor that will show a sealed upper layer which prevents any infiltration of the perched layer into the lower aquifer. Well contractor submitted a permit to SBC on 12/07/2013 but decision was made to go with a different contractor. New contractor submitted a permit for the Beta #4 well on 01/14/2014, SBC approved on 01/31/2014 based on the condition that Beta #1 be retrofitted as a monitoring well and the Beta #2 conductor casing be destroyed. The CPM further approved the use of Beta #1 for construction water while Beta #3 construction was completed. CPM approved the Beta #4 permit on 02/04/2014. New Calculation Using ATD Loads, for the Maximum Gap	P3

ABEINSA EPC

Substation Bolt Checks

Original Calculation Submitted by ATD for a Gap <2in

Bolt Characteristics:

ASTM F1554, $F_y = 36$ ksi
 Gap from Bottom of Base Plate to Top of Concrete, $h = 1.99$ in

Service Base Plate Reactions:

$P_a = 2.44$ k
 $M_a = 8.35$ k-1
 $V_u = 1.31$ k

(Note: These Reactions were obtained from Approved ATD Submittal, dated, 11/8/2012, and no information was presented on how they were generated, however they were used since it was an approved signed submittal by BV)

Ultimate Factor = 1.2
 # Bolts = 4

Ultimate Base Plate Reactions:

$P_u = 2.9$ k
 $M_u = 10.0$ k-1
 $V_u = 1.6$ k

Individual Bolts Reactions:

Base Plate Bolt to Bolt Distance, $c/c = 12.0$ in
 $P_u = 5.74$ k
 $V_u = 1.57$ k

$A_a = P_u / \phi F_y = 0.1772$ in²
 $A_{v1} = (V_u - (\mu)(P_u)) / \phi F_y = -0.0237$ in²
 $A_{v2} = (V_u / \phi F_y) = 0.0514$ in²
 $A_b = 0.5678$ in²

$A_s = A_a + A_b + A_{v1} = 0.229$ in² (if Gap, $h < 2$, A_b could be neglected per ASCE 113 7.3.2.1)

Minimum Bolt Diameter Required, $d_{min} = 0.661$ in

Matches ATD Calculation

ABEINSA EPC

Substation Bolt Checks for Non-Grout

New Calculation for a Gap $2\text{in} < G < 3\text{in}$

Bolt Characteristics:

ASTM F1554, $F_y =$	36 ksi
Clr Bottom of Base Plate to Top of Concrete, $h =$	2.5 in

Maximum Gap Surveyed in Appendix A

Service Base Plate Reactions:

$P_a =$	2.44 k
$M_a =$	8.35 k-1
$V_u =$	1.31 k

(Note: These Reactions were obtained from Approved ATD Submittal, dated, 11/8/2012, and no information was presented on how they were generated, however they were used since it was an approved signed submittal by BV)

Ultimate Factor	1.4
# Bolts =	4

Ultimate Base Plate Reactions:

$P_u =$	3.4 k
$M_u =$	11.7 k-1
$V_u =$	1.8 k

Individual Bolts Reactions:

Base Plate Bolt to Bolt Distance, $c/c =$	12.0 in
$P_u =$	6.70 k
$V_u =$	0.46 k

$$\begin{aligned}
 A_s &= P_u / \phi F_y = 0.2068 \text{ in}^2 \\
 A_{v1} &= (V_u - (\mu)(P_m)) / \phi F_y = -0.0726 \text{ in}^2 \\
 A_{v2} &= (V_u / \phi F_y) = 0.0599 \text{ in}^2 \\
 A_b &= 0.2907 \text{ in}^2 \\
 A_s &= A_s + A_b + A_v = 0.557 \text{ in}^2
 \end{aligned}$$

Minimum Bolt Diameter Required, $d_{min} =$	0.964 in	Minimum Bolt Diameter per ASCE 113
---	----------	------------------------------------

Design Check in Accordance with RCSC Section 5.2:

$$\left(\frac{T_u}{(\phi R_n)_t} \right)^2 + \left(\frac{V_u}{(\phi R_n)_v} \right)^2 < 1 \quad \text{Equation 5.2}$$

For Gr36 ASTM 1554, 1 in Bolt, $A_s =$	0.785 in ²
$F_u =$	58 ksi
$F_y =$	36 ksi
$\phi_t =$	0.9
$\phi_v =$	0.75
$(\phi R_n)_v = \phi 0.450 A_s F_u =$	15.4 kips
$(\phi R_n)_t = \phi A_s F_y =$	25.4 kips
$T_u = M_u / d / 2 \text{ Bolts} =$	5.8 kips
$V_u = V_u / \# \text{bolts} =$	0.5 kips

Equation 5.2 Becomes then:

$$\left(\frac{T_u}{(\phi R_n)_t} \right)^2 + \left(\frac{V_u}{(\phi R_n)_v} \right)^2 = 0.05 < 1, \text{ OK}$$

Bolt is OK for Combined Tension and Shear, Per ASCE 113

UNITY will still be
MAINTAINED
w/ $\frac{T_u}{\phi R_{nt}} + \frac{V_u}{\phi R_{nv}}$
