Opposed to this proposal

This project is wrong for this location and wrong for the future. The proposed site is within the 100 year flood plain of the Santa Clara River, one of the last free flowing rivers in Southern California. I believe that the future "peaker plants" should be batteries charged with electricity from clean and renewable sources. If a plant such as this one really needs to be built, it should be sited closer to the consumers of the energy, not next door to Santa Paula. Our city has already borne the brunt of being the home of the county landfill and the county jail, likely because of our disadvantaged socioeconomic status and lack of political clout. Please do not approve this site or this project.
